

Three Centuries of Earthquakes In Arkansas From 1699 through 2024

ABOUT THE MAP

This map illustrates the location and magnitude of reported earthquakes that have occurred in Arkansas from 1699 to 2024. The data source for the earthquakes depicted on this map was derived from the Office of the State Geologist (OSG) earthquake catalog. This catalog has been compiled from various sources and publications and includes date, time, latitude, longitude, magnitude or intensity and depth information. Some event records may contain incomplete data due to their date and/or source. The OSG earthquake catalog is dynamic and continually updated as event parameters are modified, new events are added and occasionally events are deleted.

Acknowledgments

We extend our appreciation to John David McFarland III for compiling the original earthquake database used to make this map and for sharing his knowledge of Arkansas Seismicity. We also thank Buddy Schweig, USGS and Center for Earthquake Research and Information (CERI) at the University of Memphis and Russell Wheeler for their advice regarding the earthquake database.
