GROUND-WATER LEVELS IN ARKANSAS, SPRING 1982

By Joe Edds

ABSTRACT

The report contains about 640 ground-water level measurements made in observation wells in Arkansas in the spring of 1982. In addition, the report contains potentiometric-surface maps and well hydrographs relating to the alluvial aquifer and the Sparta Sand, the most important aquifers with respect to ground-water availability and use in Arkansas.

INTRODUCTION

This report contains records of water-level measurements from wells in Arkansas that comprise the statewide observation-well network maintained by the U.S. Geological Survey, in cooperation with the Arkansas Geological Commission. The observation-well network is designed to provide data for evaluation of the regional trend of water-level changes in each of the principal water-bearing formations (aquifers) that are tapped by wells in the State.

Water-level measurements listed in the report were made during March, April, and May 1982. The data are listed by aquifer, then by county. For additional information on the hydrologic properties of the aquifer, the reader is referred to the selected references section of the report.

Also included in the report are potentiometric-surface maps and water-level hydrographs for the alluvial aquifer and the Sparta Sand aquifer--two important aquifers in Arkansas for water availability and use. The "Sparta Sand" aquifer, as termed in this report, also includes a water-bearing unit

in northeastern Arkansas that is variously termed locally as the "Memphis aquifer" or the "500-foot" sand.

The potentiometric-surface maps (figs. 1 and 2), prepared from data in tables 1 and 4, indicate the direction of downgradient movement of water in the alluvial aquifer and the Sparta Sand aquifer. For example, the potentiometric surface for the Sparta Sand (fig. 2) indicates that water moves from surrounding areas toward centers of potentiometric-surface lows in Columbia, Union, and Jefferson Counties. The water-level hydrographs (figs. 3 and 4) show long-term trends in water levels in selected wells completed in the alluvial aquifer and the Sparta Sand aquifer.

DATA

Table headings used in the report are defined as follows:

Well number: Township, range, and section number designation of well (fig. 5).

Altitude of land surface: Altitude of the land surface at the well, in feet above the National Geodetic Vertical Datum of 1929 (sea level).

Depth to water: Measured depth to water, in feet below land surface. A plus (+) preceding the depth-to-water value indicates the water level is above land surface.

Altitude of water level: Altitude of water level in feet above, or feet below (-) sea level.

Net change in water level: Difference between the 1982 depth-to-water measurements and the 1978 measurements and the 1980 measurements. Symbol preceding number indicates a decline (-) or a rise (+) in water levels in the well during the period unless specified differently under "Remarks."

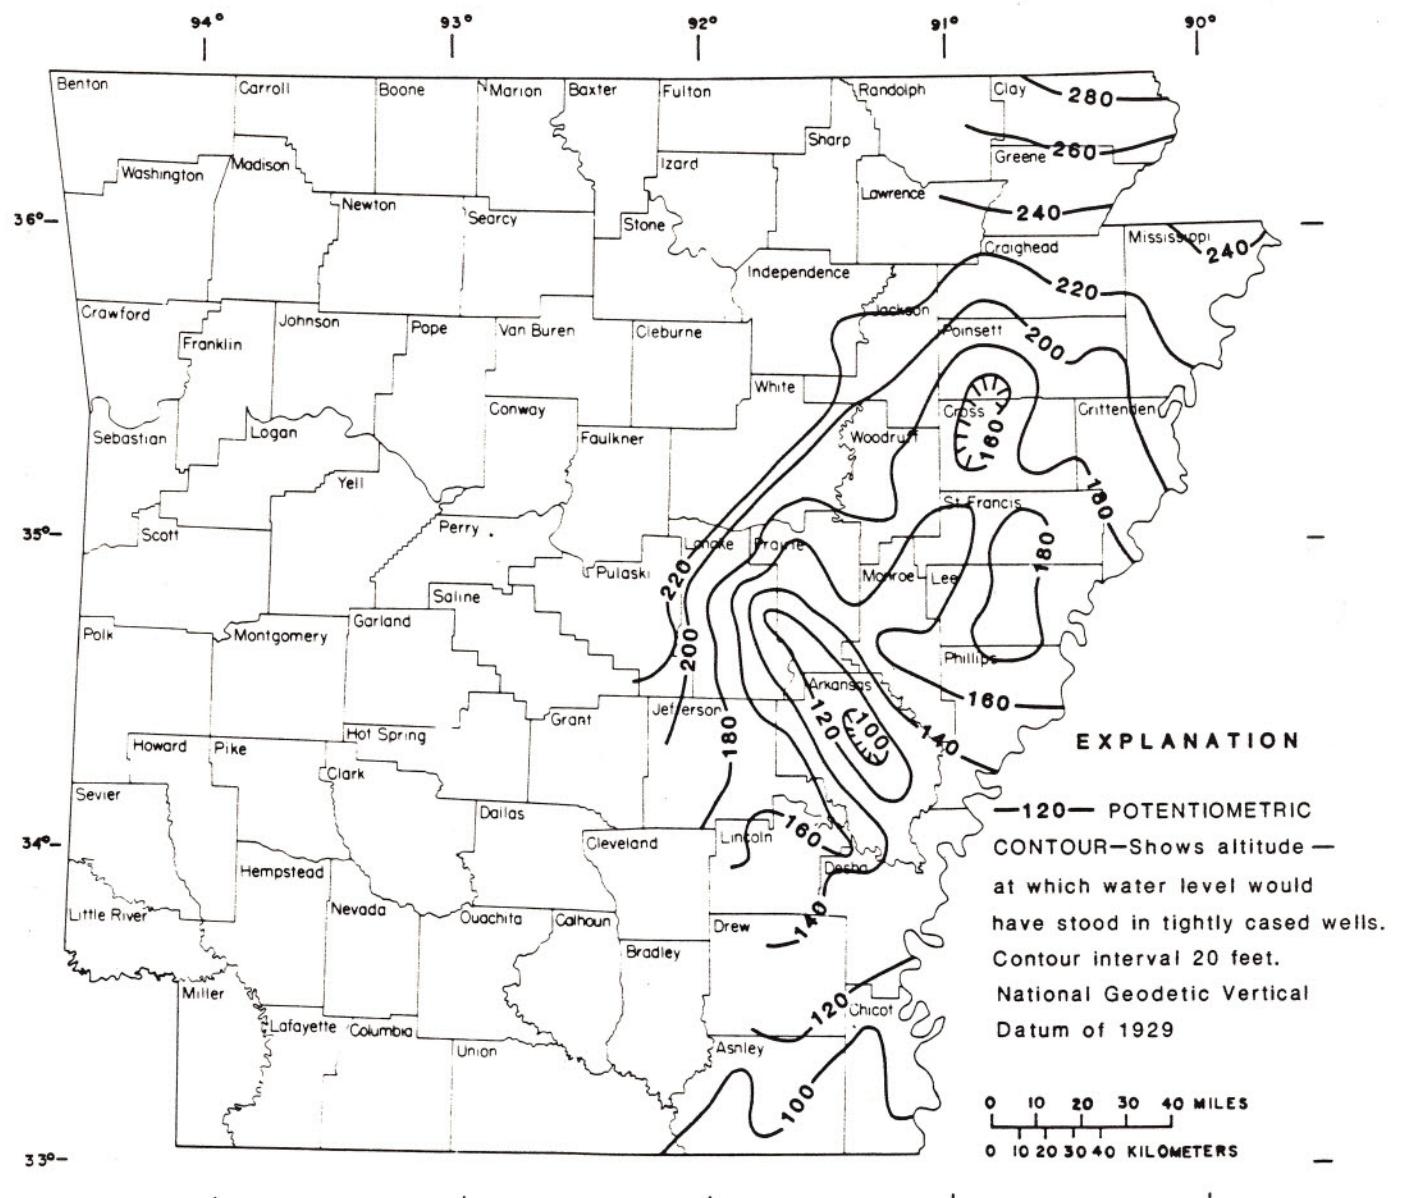

Figure 1.—Potentiometric surface of the alluvial aquifer in Arkansas, spring 1982.

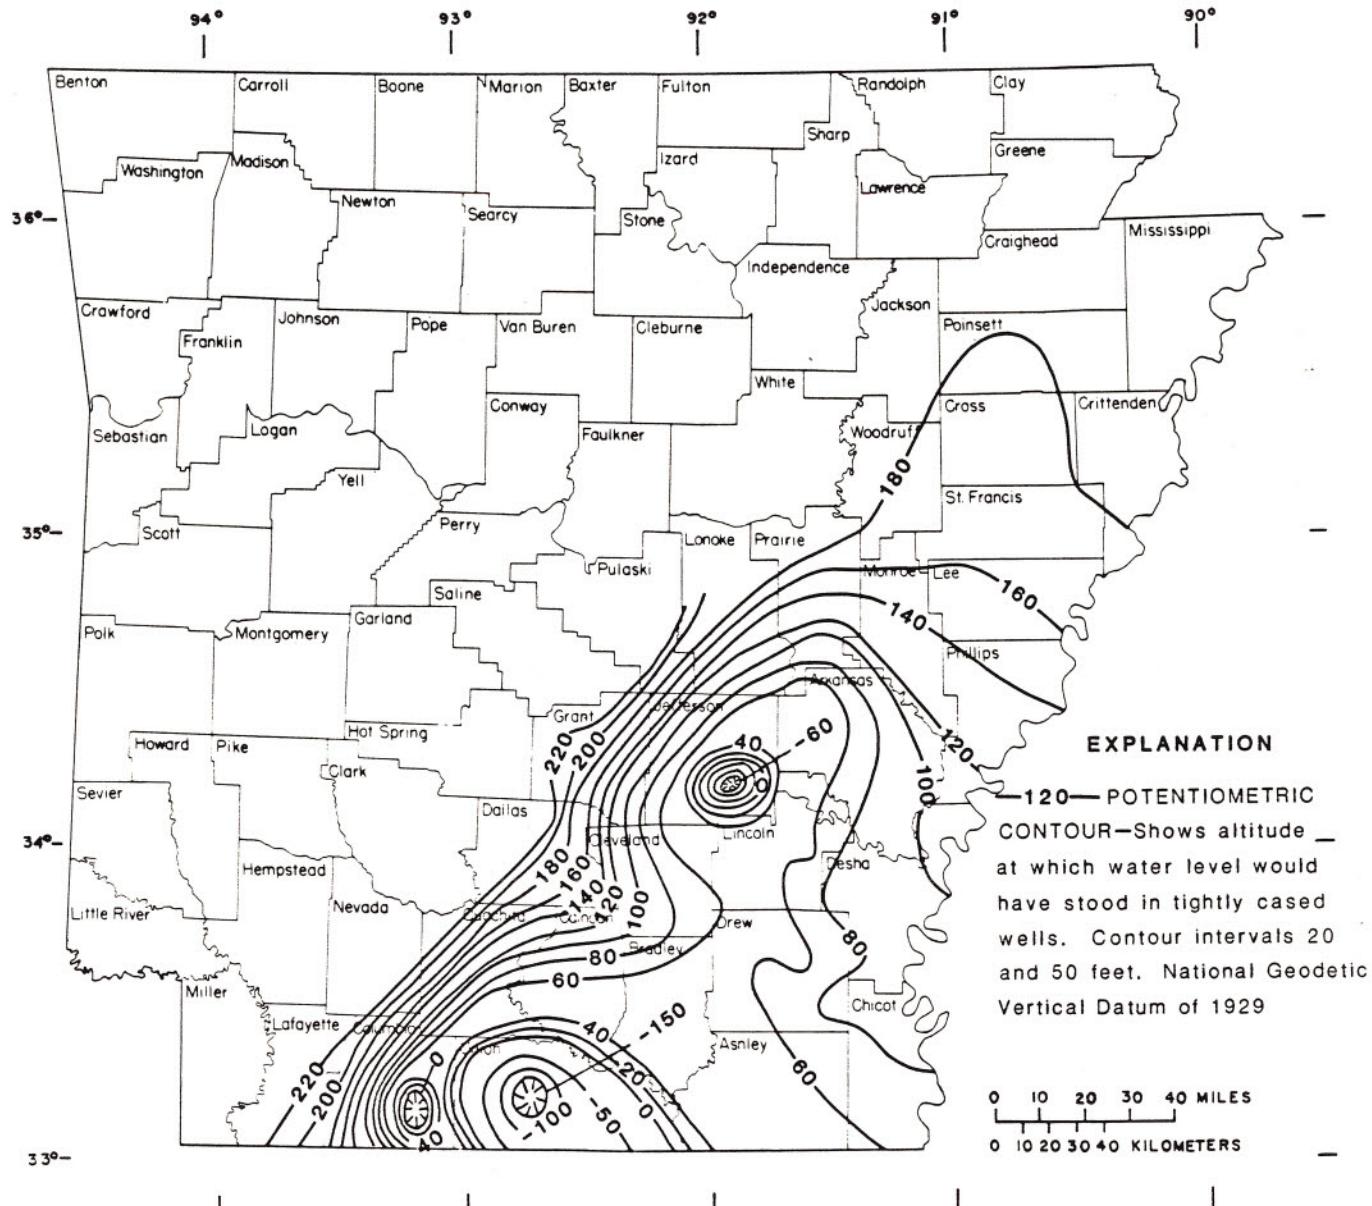

Figure 2.--Potentiometric surface of the Sparta Sand aquifer in Arkansas, spring 1982.

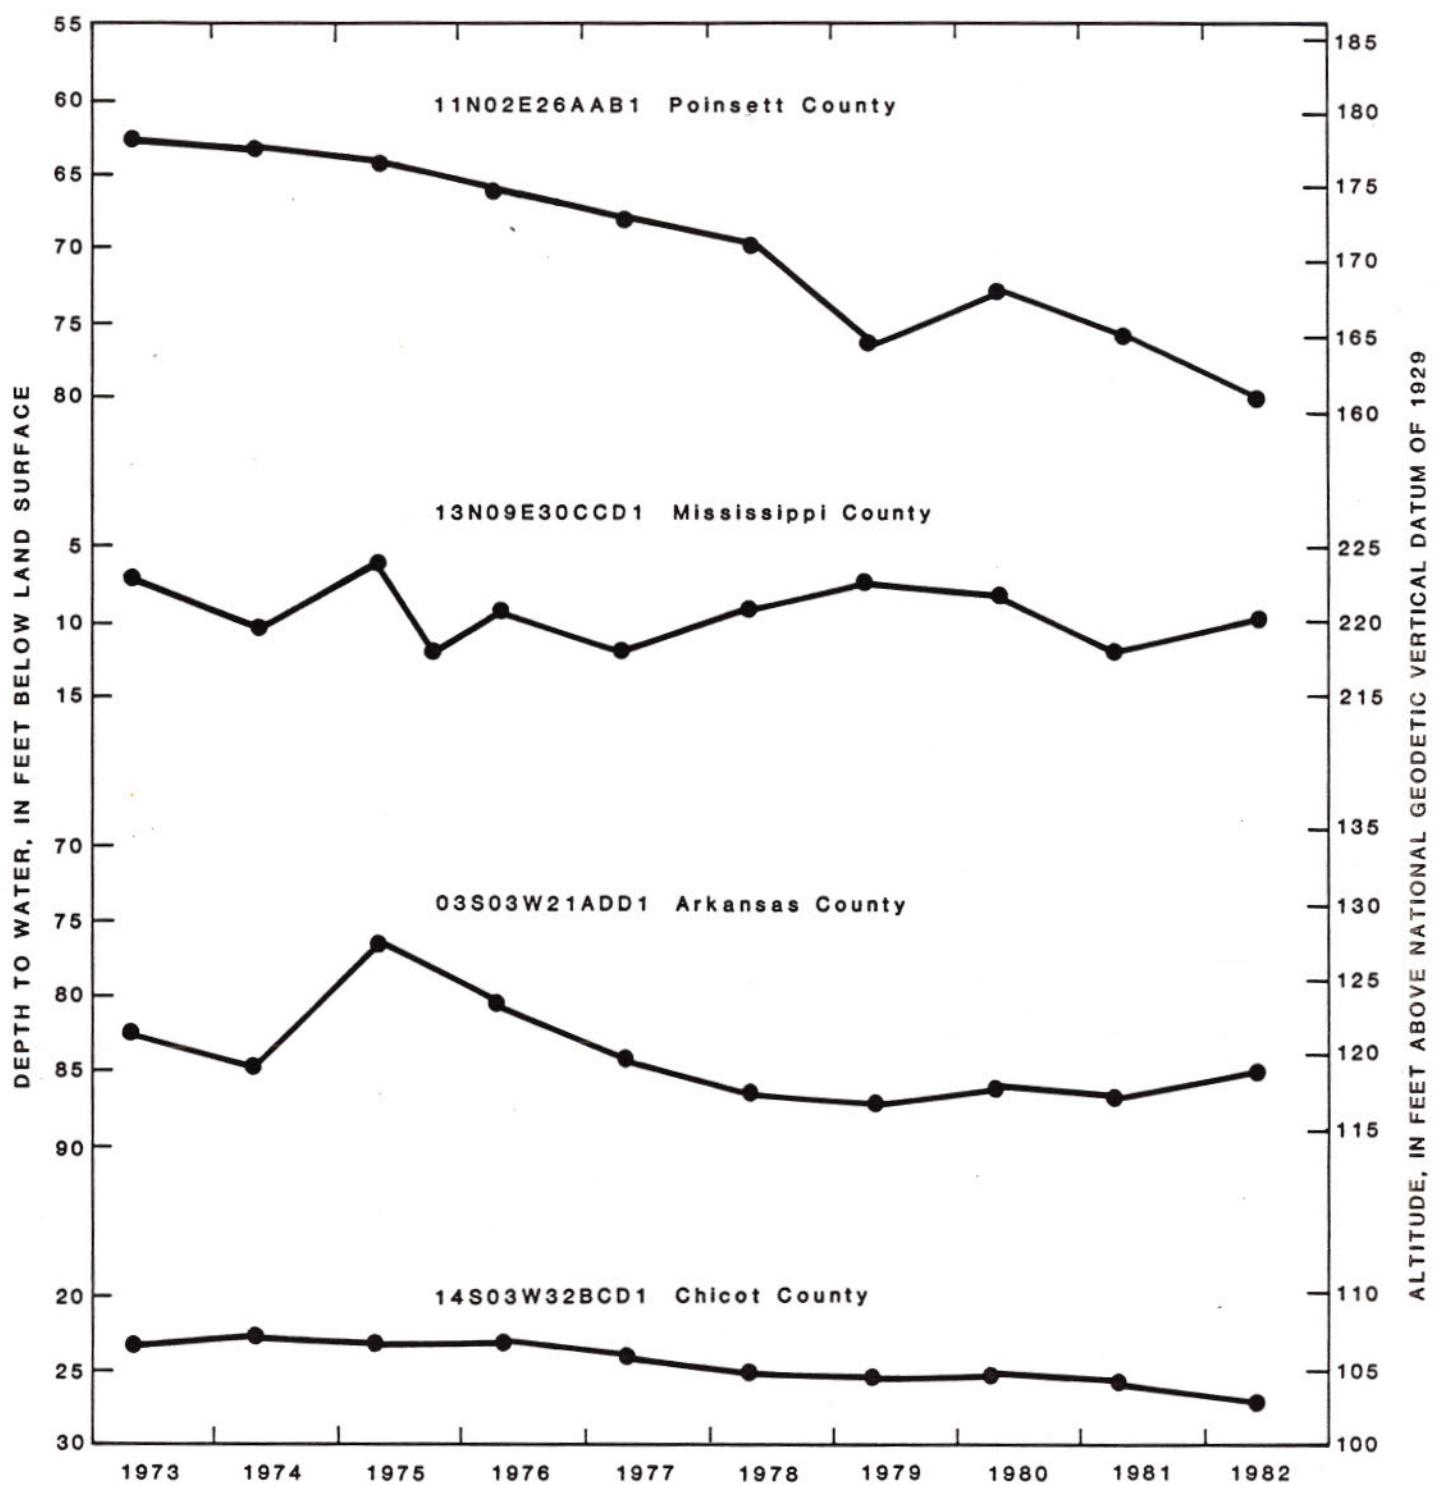

Figure 3.—Water-level hydrographs for selected wells completed in the alluvial aquifer.

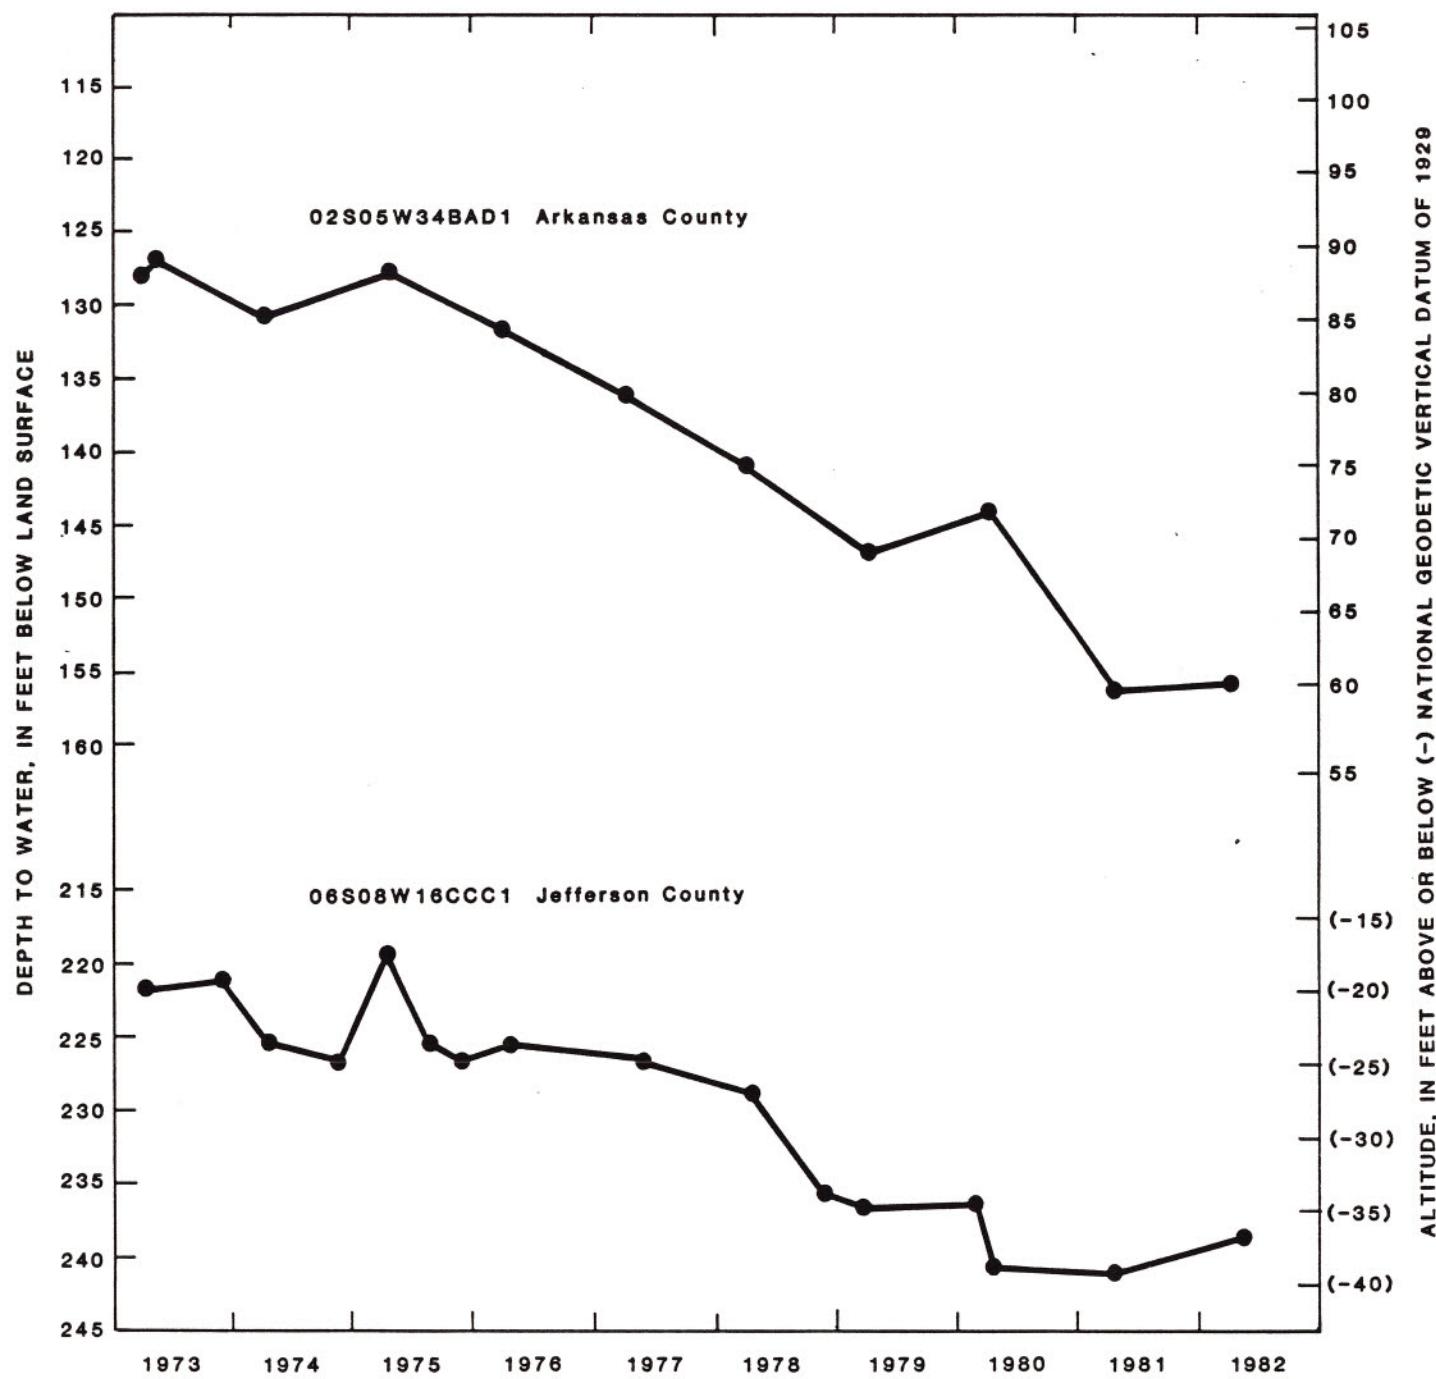

Figure 4, sheet 1 of 2.—Water-level hydrographs for selected wells completed in the Sparta Sand aquifer.

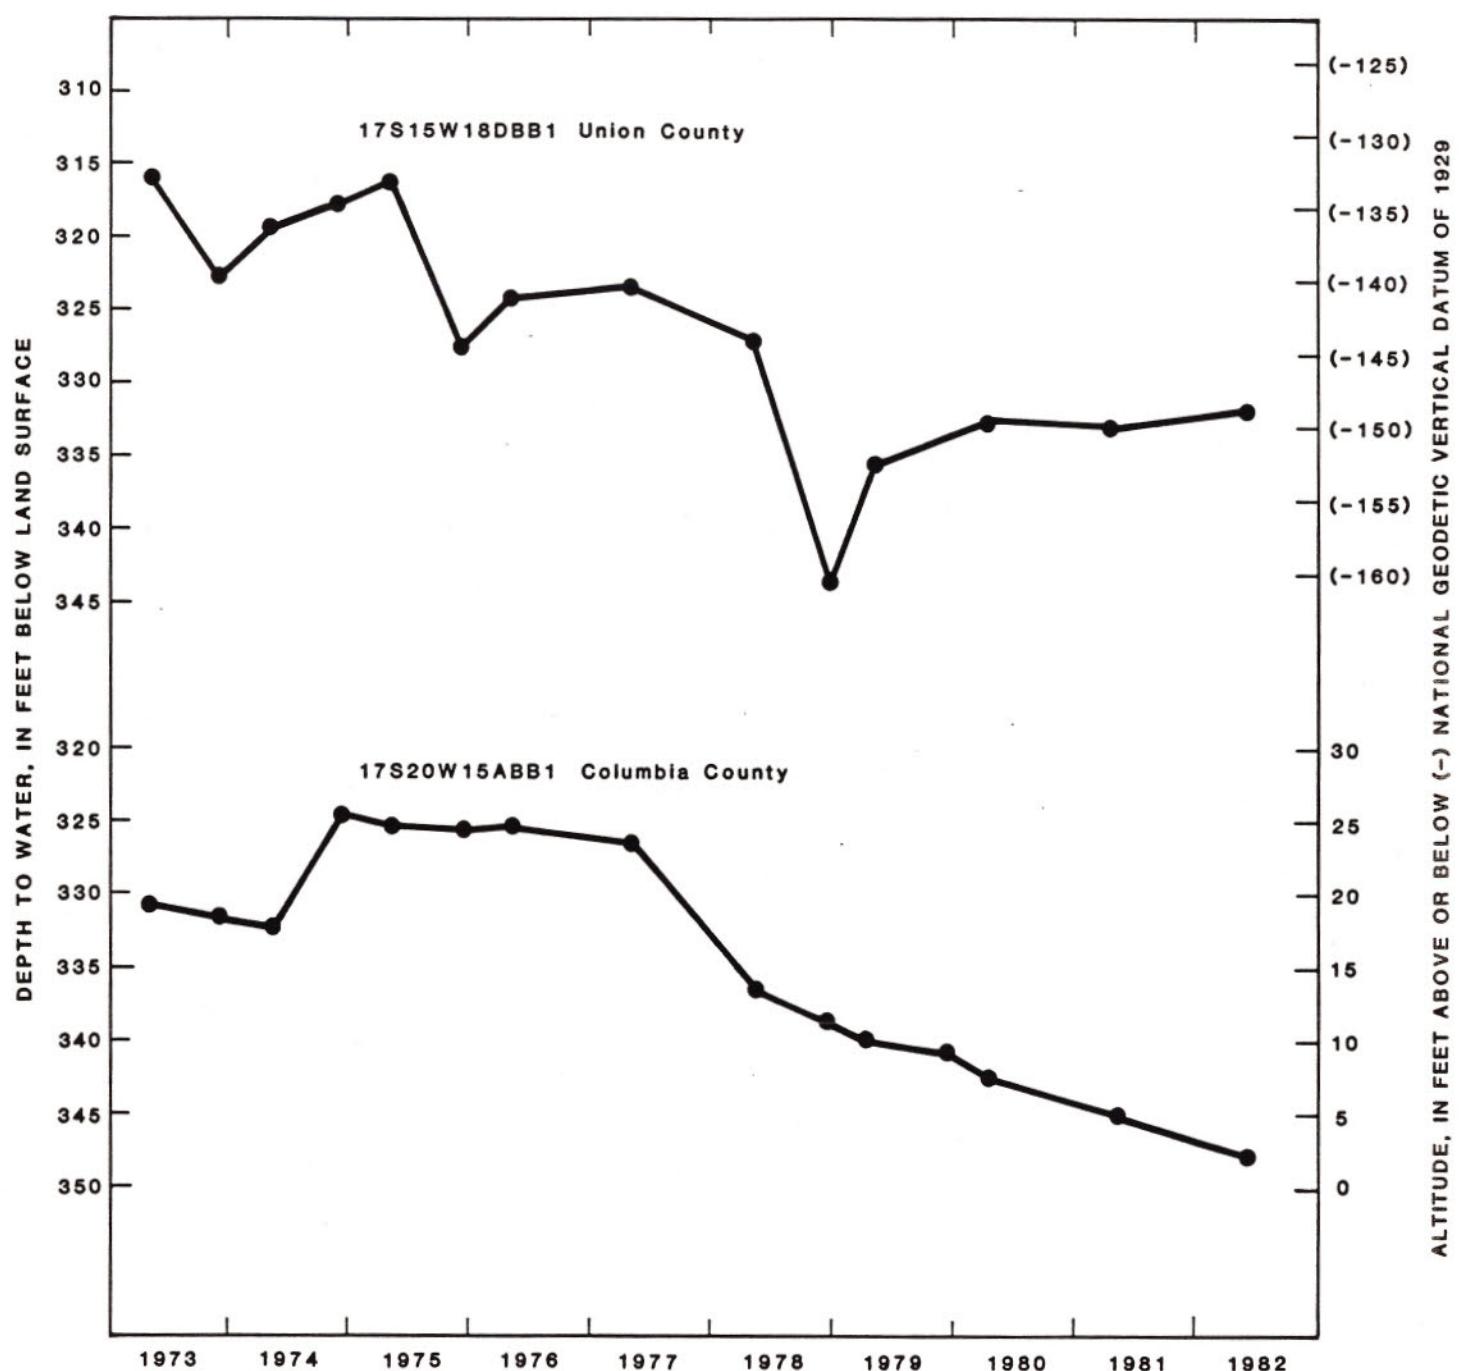

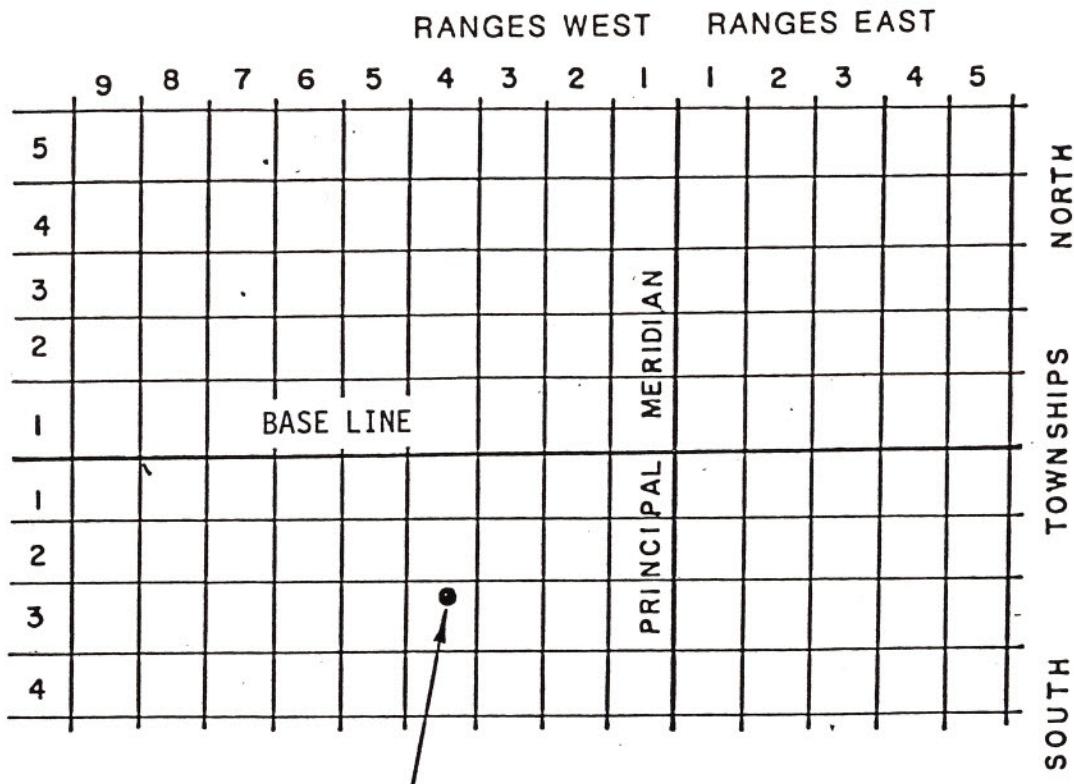

Figure 4, sheet 2 of 2.—Water-level hydrographs for selected wells completed in the Sparta Sand aquifer.

Remarks: (Year)--1982, time interval for net-change value where water-level data are available for less than 5 years.

Data for depths of wells are not given in this report. However, a qualitative distinction generally is made locally for describing well depths. Thus, wells tapping the alluvial aquifer are considered to be "shallow wells," whereas wells tapping other aquifers are considered to be "deep wells."

WELL-NUMBERING SYSTEM

The well-numbering system used in this report is based upon the location of the wells according to the federal land survey used in Arkansas. The component parts of a well number are the township number, the range number, the section number, and three letters which indicate, respectively, the quarter section, the quarter-quarter section, and the quarter-quarter-quarter section in which the well is located. The letters are assigned counterclockwise, beginning with "A" in the northeast quarter or quarter-quarter or quarter-quarter-quarter section in which the well is located. For example, well 03S04W03DCA16 (fig. 5) is located in Township 3 South, Range 4 West, and in the northeast quarter of the southwest quarter of the southeast quarter of section 3. This well is the 16th well in this quarter-quarter-quarter section of section 3 from which data were collected.
