

**Car of Antimony Ore Shipped  
From Sevier County.**

1935  
DeQueen, Ark., Oct. 2 (AP).—The first carload of antimony ore to be shipped from Sevier county since the World war was loaded today at King spur, eight miles north of DeQueen.

The ore is from a mine in the old May area in the northeast corner of the county, which at one time was the largest producer of antimony in America.

O'Connell & Curtis, operators from Boston, Mass., and Colorado, have a crew of 15 men engaged in taking out the ore, and the shaft they are now digging has reached a depth of 50 feet. Several prospectors have taken leads in the Gillham antimony area during the past few weeks.

**Antimony Is  
Again Mined**

**First Carload Since  
World War Shipped  
From Sevier County.**

DeQueen (AP)—The first carload of antimony ore to be shipped from Sevier county since the World war was being loaded today at King spur, eight miles north of DeQueen.

The ore is from a mine in the old May area in the northeast corner of the county, which was at one time the largest producer of antimony in America.

O'Connell and Curtis, operators from Boston, Mass., and Colorado, have a crew of 15 men engaged in taking out the ore, and the shaft they are now digging has reached a depth of 50 feet. A number of prospectors have visited the Gillham antimony area during the past few weeks and a number of leases have been taken.
