Many Deposits of Bentonite Found

Specimens Forged to Geologists From Various Parts of State.

The effects of the Arkansas State Chamber of Commerce and the Arkansas Geological Survey to find deposits of bentonite as seamed two weeks ago by the State Chamber have had surprising results. Dr. E. W. Haddox, manager of the chamber, said yesterday that the Bentonite is very much sought after by those interested in the mineral's uses in large quantities in Newton county. The Newton paper, it was said, has been sold to new bureaus.

In Newton county.

The state-wide interest aroused as a result of the Bentonite project is very important, as it means that the region is growing in importance and will eventually become a large producer of the clay. The Bentonite is particularly valuable for its use in the manufacture of paints, as it is a natural coloring matter. It is also valuable in the manufacture of bricks, and is used extensively in the manufacture of iron and steel pipes. The Bentonite is also used as a filler in the manufacture of concrete, and as a sealant in the manufacture of various types of paper.

The state's interest in Bentonite is due to the fact that it is a valuable mineral, and is found in large quantities in certain areas. It is a soft, clay-like substance, and is used in the manufacture of a variety of products, including paints, bricks, and paper. The Bentonite is also used as a sealant in the manufacture of concrete, and as a filler in the manufacture of various types of paper.
