INDIANA COMPANY BUILDING SAND, CLAY PLANT AT PIGGOTT

By TOM SHIRAS

Guion, Dec. 28.—When the average river at Decatur, Ill., is a river of sand, he associates it with mortar, bricks and stone, and when he thinks of it as a product of the sand, he thinks of it as sand banks or sandbars. The reason why, in the last few years, the largest producers of glass sand and sand have been located at Piggott, Ark., and Guion, Ark., is that the sand found there is of a type that is needed in the sand glass industry. The sand found at Piggott for several months is being used in the manufacture of clay and sand, but it is not being used in the manufacture of glass. The sand found at Guion is being used in the manufacture of glass, and the sand found at Piggott is being used in the manufacture of clay.
