THE MONEY NEEDED FOR OUR GAZETGEOLOGICAL WORK.2-1-31

A bill introduced by Representative Johnston of Johnson county would supplement the funds supporting the work of the state geologist by devoting to this use the revenue from the sand and gravel tax now turned into general revenue. This office has been to get the best results. In the case of supported since 1927 by a small percentage of the severance tax, and about 98 per cent of this support has of frequent changes will of course be come from the tax on oil production. even more marked. But during the last three years oil

was more desirable to forward every possibility of development in Arkan-propriation to redeem vouchers issued sas. In its work of exploring and under the governor's deficiency proclamation of December 27, 1929, for benefit of the state geologist. Calendar, the benefit of the state geologist. Calendar, To make approximately the state geologist. survey directed by Mr. Branner is S. B. No. 28 (Counts). To make aplaying the foundation for mineral industries. Our soil hides much wealth of this sort, and Mr. Branner is the agent we employ to bring this wealth to the attention of the mining and quarrying world. His office has on its mailing list some 7,000 names of members of scientific and technical organizations, companies and individuals interested in the development of mineral resources, and its publications go into colleges, universities and libraries all over the United States and Canada, and in foreign countries.

The average revenue from the sand and gravel tax for the last six years has been about \$15,715, not an important sum when added to the general revenue fund of the state, but a sum sufficient to relieve the state geological survey from the worst of the financial pressure by which it is now handicapped. It seems that there could be no more appropriate use for a tax on one class of our mineral resources than its appropriation for larger development of our mineral wealth as a whole.

KEEPING QUALIFIED MEN IN PUBLIC POSITIONS. 2-4-31

Governor Parnell's reappointment of George C. Branner as state geologist was the thing the general manager of a private business concern would have done under like circumstances. When a position requires special ability, training and experience, the public interest suffers when it is made a political prize and its incumbent is changed every few years. This is not to say that once a man has obtained a post in the public service, it should be regarded as his personal possession for the rest of his active life. But here again, as in private business, every question of tenure of office ought to be considered on its own particular merits. When the right man gets into the right place his retention makes his service increasingly valuable. Arkansas has profited greatly, for example, by having an incumbent of Mr. Branner's qualifications serve steadily as state geologist. There are other public positions to which the same reasoning applies, and other men in Arkansas who could do increasingly valuable work for the state if appointed on merit and qualifications and kept steadily on jobs for which they were particularly well fitted.

The report of the survey of the Arkansas state government directed attention to the waste and inefficiency involved in the heavy turnover of employes when elective offices change hands, and hundreds of employes, selected with little regard for their training and experience, replace employes who may also have come in as raw recruits and may have hardly had time to become familiar with the routine of the offices in which they work. Even in the case of ordinary

clerical workers, such a system fails positions calling for special training, ability or knowledge, the bad effects

production has declined to such adegree that out of \$55,600 appropriated for geological work this year, it is estimated that not more than \$15,000 will actually be collected.

The Gazette understands that this shortage is having a serious effect on the continuation of the state geological survey, and is holding back.

There never was a time when it of revenues to supplement Act 263 of

said he would try to call it up today.

Appropriation Bills Read.

The House began the afternoon session as a Committee of the Whole, and consideration of the 18 measures soon was broken by Representative Toney of Jefferson.

"I'd like some explanation of these

of Jefferson. A comparison of these bills," he declared. "Before we place any more burdens on the people I'd like to know what we're doing."

Representative Deane of Arkansas had moved passage of Senate Bill No. 27 by Senator Counts to appropriate thinds to redeam valuebre issued under

funds to redeem vouchers issued under authority of a deficiency proclamation of the governor for the benefit of the state geologist.

Representative Toney said he under-

stood a deficiency proclamation was issued only in times of invasion or emergency, and wound up by demanding to know "what invasion occurred to warrant payment of \$3,000 to the state geologist?"

Representative Johnston of Johnson explained that the money had been expended to enable the state geologist to search for water in the rice belt and to investigate the vital shortage of water supply.

Representative Wilson of Clark su

gested that the rice planters foot their own bills for water. Representative Deane said he believ-

ed the measure was justified as a means of saving the rice industry. The means of saving the rice industry. The incident was closed amid laughter, when Mr. Brown of Cleveland said:
"If Mr. Johnston and the governor of Arkansas agree on this bill it must be all right." The members voted

Act No. 294 (H. B. No. 548, Budget). General departmental appropriation Democrat HOUSE BILL NO. 121. 3-2-31

House Bill No. 121, by Johnston of Johnson county, has been passed by both houses of the Arkansas legislature and awaits the Governor's signature. It provides for the transfer of the sand and gravel tax from the general revenue fund to the state geologist fund.

The bill should serve to call attention to the almost deplorable condition into which we have allowed the State Geological Survey, one of our most vital departments of government, to drift during the last two years.

Now, of course, it can be argued soundly that the decrease in the severance tax, from which the survey draws its sustenance, can not be blamed upon any human agency. But the further fact remains that while the department received \$32,000 for operation expenses in 1927-1928, that sum has dwindled until it will have decreased to about \$12,400 for the next fiscal year, and a possible slump during the following year to \$9,900.

It is plain, even to the layman, that the Geologic Survey can do more than drag out a bare existence with any such income. The sand and gravel tax, it is estimated, will amount to between \$19,000 and \$21,000, and while that amount would have a trivial effect upon the needs of the general revenue fund, it can and will have a highly beneficial effect upon the usefulness of the state geologist department.

Let us assume that the department will be given only enough to keep its doors open, so to speak, what will be the result? The present State-Federal stream gaging program will be stopped, in fact, all State-Federal geological projects will be brought to a halt. Five completed reports now in the geological department will remain there because of lack of funds to have them published.

The reports furnish the latest information on Arkansas' greatest potential source of wealth in its minerals, its oils. It is in such reports that industrial leaders learn where they can turn for raw material need in their operations. Without them Arkansas' buried wealth might as well remain unknown forever.

Governor Parnell, by signing House Bill No. 121, can accomplish two things: He can add to the state's wealth by aiding the geologist department and he can save money for the taxpayers by forcing economy in expenditures from the general revenue fund.

DemocraWHERE THE SCHOOL MONEY WENT. 9-24-31

While the question of more money for schools is being discussed there are certain facts, brought out by the educational leaders themselves, which should not be overlooked. While we are talking of a possible special session of the legislature to seek new fields and rates of taxation, let us see what has become of the money secured from taxation and originally set aside for school purposes only.

Here are some of the amounts diverted from the common school fund and the equalizing fund during the last two

Maintenance Department of Education, \$139,343 (formerly supported from the general revenue fund).

School for the Deaf, \$227,998, and School for the Blind, \$116,032 (both institutions formerly supported from the charities fund).

For support of State Geological Survey from severance tax, \$55,808. (Department formerly supported from general revenue fund.)

Total appropriations from school funds for two years, \$539,182.

These appropriations were made ostensibly to relieve the general revenue and charities funds, the teachers said, but at the same time \$240,000 was added to the appropriations from the general revenue fund for the support during the two years of additional state schools, establishment of which has been consistently opposed by the educational leaders of the state.

We quote further from the educators' statement:

"At the time the Hall income tax bill was passed the avowed purpose of the act was to furnish revenue for the equalizing fund. In the last hours of the 1929 session of the legislature, after the income tax act was passed, which provided for appropriating funds not needed for the construction of state charitable institutions to a tax reduction fund. During the last biennium the amount of income tax going to tax reduction instead of to the equalizing fund was \$878,-449.18. Thus the total amount of state funds diverted by the legislature for other purposes was \$1,657,631.95."

Which inspires these questions: Why should more taxes be levied when more than \$1,600,000 rightfully belonging to the common school fund has been diverted to other funds for apparent political reasons? Are the people of Arkansas contributing generously to their schools? The answer to the latter question certainly is in the affirmative.

Overlooked a Few.

In last week's Collier's Walter Davenport amusingly discussed Hot Springs under the somewhat lurid topic, "Sin Takes a Hot Bath." But Mr. Davenport is often more amusing than accurate, or, to look at it another way, he is often amusing when he is in-

I found George C. Branner, state geologist, one day last week chuckling over a passage in Mr. Davenport's earlier article on Arkansas and the drouth situation. The writer had said some-thing to the effect that "of the 103 minerals known to geologists. Arkansas produces all except one, borax.'

Any high school student knows there are more than 1,000 minerals in the Americas alone, and that there are beween 300 and 400 in Arkansas. But this state, wonderful as it undoubtedly is, produces only a dozen or so minerals... Maybe I'm wrong in these figures, but never so wrong as was Mr.

Su Letter to Edeter of Demoire

LEFT COMMON SCHOOL FUNDS. Denies

The common schools of Arkansas are so badly in need of funds that educational leaders favor a special session of the legislature to enact new tax legislation. The inference is that the limit has been reached in ability to collect tax money for the schools and the only alternative is higher rates colleges. or new sources of taxation. We submit the following as showing where some of the school money has been going:

Maintenance of Department of Education, \$139,343. School for the Deaf, \$227,998.

School for the Blind, \$116,032.

For support of State Geological Survey from severance tax, \$55,808. (Geologist Branner denies any school funds go to his department but Legislative Committee of Arkansas Education contends otherwise).

Total appropriations from school funds for two years, \$539,182.

Additional state schools, declared "useless," \$240,000.

Failure of tax collectors to collect half of poll taxes and 22 per cent of personal property taxes last year, \$722,852. (And the chairman of the tax commission says conditions only slightly worse than in previous years).

A total of those few items representing money which should now be available to the common schools is, in round numbers, \$1,502,000.

And yet we are told that taxes must be raised not only to meet demands of the future but of the present. Does any man believe that this million and a half total represents more than a small potrion of the money lost to schools?

Editors Flay "Politics" in State Schools

Press Association Speakers Favor Cut in Educational Taxes.

Co-operation of Arkansas editors to effect a decrease in taxes through the discontinuance of colleges "built for political purposes," through a secession of Arkansas schools from the ranks of the North Central Association and through cutting expenses in county and state education departments was advocated by speakers at the opening morning session of the annual mid-winter meeting of the Arkansas Press Association at the Hotel Marion Saturday. Hotel Marion Saturday.

About 40 newspaper men were present at the meeting, called by Alfred Hawn of Huntsville, president. Details of the meeting were arranged by Ciio Harper of Little Rock, secretary of the association. Mr. Harper announced that at the afternoon session C. E. Palmer of Hot Springs and El Dorado would speak on "Needed State Legislation Which Can Probably Be Best Secured by Initiated Acts or Constitutional Amendments."

William Folsom, editor of Brinkley,

Acts or Constitutional Amendments."

William Folsom, editor of Brinkley, opened the discussion on taxation, speaking particularly of school taxes. He declared that to consider the establishment of any more tax supported schools in Arkansas would be foolish and declared that Arkansas could do without some of the schools she has already. "We must stand as a unit and fight against any increase in taxation," he said, "regardless of what effect such an attitude will have on our advertising business."

Curtis Hurley, Morrilton editor.

Curtis Hurley, Morrilton editor, said that state supported colleges would need as much revenue as they have formerly received and that if taxes are lowered tuitions will be raised. He warned against the dangers of political advertising, saying that it was the better policy to go after legitimate advertising business.

A sharp attack against school taxes and school administration in Arkansas was made by J. H. Henderson of DeWitt. He said that "the first thing we have got to do in the school affairs of Arkansas is o have a good housecleaning. A readjustment in the administration of schools is necessary. And the quicker the North Central Association is outlawed in Arkansas the better off the taxpayers will be."

Says Teachers Overpaid.

Colleges Prosper at Expense of Lower Institutions,

Says Educator.

By KARR SHANNON.

(Izard County Superintendent of Schools.)

A birdseye view of Arkansas' school Says Teachers Overpaid.

Mr. Henderson said that the North Central Association of schools required that teachers be paid too high salaries for the number of hours they were required to work. The North Central Association requirements were designed so that schools would have to employ more teachers from schools of the association. He denounced the practice of spending aspects of tax money for school athletics, saying that school athletics, were proving more harmful than otherwise.

He said that expenses in the state department of education could be curtailer one-half. He proposed that a halt be put to the diversion of school funds for the state geological survey and other purposes. Newspaper men must lead a return to normalcy by a demand for retrenchments in taxation. Pension lists must be purged, he said, and schools that were built for political purposes must be abandoned so that other schools may not be deprived of the revenue these schools are receiving.

Mr. Henderson was loudly applauded at the close of his address.
The following resolution, presented by Clio Harper, was unanimously passed:

passed:
Resolved: That for the year 1932,
we, the members of the newspaper
fraternity of Arkansas, will particularly be honest with ourselves and
with our readers:

That we will not deceive ourselves or them with an unreasoning opti-mism, or make ourselves miserable with an equally unfounded pessimism;

but,
That we will accept facts as they are, publish the truth, encourage, wherever possible, sympathize when

That we will not yield to hysteria, but will keep our heads up and our eyes to the front, and maintain an intelligent grasp upon realities.

A telegram of greeting from H. C. Hotaling, executive secretary of the National Editorial Association, was read by Mr. Harper. Mr. Hotaling mentioned the fact that James R. Bettis of the Arkansas Democrat was once president of the National Editorial Association.

Science Club to Meet .- Dr. Howard A. Dawson, research worker for the state Department of Education, will address members of the Little Rock Science club on various phases of special edu-cational problems in the state, as prin-cipal speaker on the program following the dinner meeting of the organization at the Albert Pike hotel tonight. The meeting will convene at 7 p. m. George C. Branner, president, will preside.

ARKANSAS' SCHOOL SYSTEM CRITICIZED

system would reveal something as fol-

high schools almost as sadly neglected, with poorly paid teachers, incomplete libraries, barren laboratories, low grades, and a crushing indebtedness.

Down on this comes the weight of

numerous state colleges that make the vide more money for this work. At foundation groan. They have well built the present time the state and it houses, modern equipment and well trained, well paid professors. The high in many instances, impose upon the lower grades in order to meet the en-

Agriculture College, the weathercock of the whole system. This does not take into account the authorized issuance of over two million dollars for buildngs and equipment of these institu-

What was done for the foundation? Act 187 provides for taking \$116,200 out of the common school fund, \$46,-200 out of the revolving loan fund, and 200 out of the revolving loan lunu, and \$28,000 out of the state equalizing fund for the maintenance of the state Department of Education for the biennial parthent of Education for the biennial period. Acts 170 and 190 respectively allow the biennial appropriation of \$116,040 for the School for the Blind and \$234,000 for the School for the Deaf out of funds formerly going to the common schools. Act 183 allows

the state geologist to take \$70,000 from the severence tax collections levied and collected, supposedly for the common collected.

Common Schools Neglected. We find that scarcely anything was done for the repair and upkeep of our common schools, the foundation of the system. But toward the close of the legislative session, Act 251 was passed which provided for a Legislative committee on school problems and appropriated \$5,000 for the expense of the committee. This committee held several meetings and finally took a trip eral meetings and finally took a trip into neighbor states to find out how they were doing it. Nothing was accomplished, and they found out about as much about the other states as an average citizen could find out by spending 50 cents for postage.

Now while the "higher institutions"

go unhampered, the common schools must carry on with short terms, reduction of salaries, cold, schoolhouses. Many unpaid rural teachers continue to teach, do their own janitor work, cut their own wood and drive school

A house is no stronger than its foun-dation, and like the proverbial house "built upon the sand" cannot weather the storms and perils. Unless the whole system is made over with a firmer foundation, before we weather another financial depression, the whole system will fall.

NO SCHOOL MONEY GOES TO THE STATE GEOLOGIST.

Superintendent Karr Shannon of the Izard county schools is on solid ground when he insists that money raised by state taxation to support the public schools should not be used for anything except the public schools. But when he implies, in an article in this newspaper, that money from severance taxation levied for the common schools is being used to support the state geologist's office, it appears that a misunderstanding exists.

The common school severance tax, authorized by Act No. 118 of 1923, is still distributed two-thirds to the state common school fund and one-third to the counties of origin, which divide it equally between their school and road funds. By Act No. 142 of 1927 the legislature imposed additional severance taxes—one-tenth of one per cent on the gross market value of specified minerals and one mill per ton on manganese ore—to support the state geologist's office. The geological office severance tax therefore does not represent any diversion from the common school severance tax, but constitutes separate and additional taxation on certain mineral products. To supplement its inadequate yield, the 1931 legislature gave the geologist's office the entire yield of the sand and gravel tax. But that tax had previously been going into general revenue, not into any educational fund. /-18-32

we maintain a state geologist primarily to promote the discovery, exploration and development of our mineral resources. There could be no more appropriate source of funds for this strictly practical work than a tax on the severance of mineral wealth from our soil. As a business proposifrom our soil. As a business proposition, it would probably pay us to pro-

the present time the state geologist has a number of completed reports schools must make great sacrifices, and which he cannot publish because there is no money to print them. trance requirements demanded of the Among them are reports of large commercial and industrial importance-The last Arkansas legislature was careful to keep the roof of this school system in good repair by making appropriations totaling \$2,710,200 for these colleges for the two year period. Of this amount \$940,400 was appropriated for institutions sought to be abolished, including \$75,000 for the Beebe Junior Agriculture College, the weatherwork was and ground water levels in on oil and gas formations, on deposits kansas, and ground water levels in eastern Arkansas, are being carried on.

> Suspects Something Wrong in Operation of Severance Tax.

Operation of Severance Tax.

To the Editor of the Gazette:

I am very thankful to the Arkansas Gazette for the editorial of last Monday, January 18, that "No School Money Goes to the State Geologist."
The favorable comments on the usefulness of the state geologist are undoubtedly true, and every citizen should know of its great value to the state. In my recent article to the Gazette I did not intend to cast any reflection against the state geologist as to his value. Neither do I want to be misunderstood in my attitude toward the schools for the blind and deaf. There are no two schools more deserving in Arkansas, and the state owes the highest duty to these unfortunates in providing for them the best possible facilities for learning. I simply was criticizing the recent legislature for appropriating funds supposedly levied and collected for the common schools to other institutions. It is gratifying to know that the resources of Arkansas are so developed and so plentiful that the additional severance tax of one-tenth of one per cent on the gross market value of specified minerals and one mill per ton on manganese ore, according to Act No. 142 of 1927, will net \$70,000 for

specified minerals and one mill per ton on manganese ore, according to Act No. 142 of 1927, will net \$70,000 for the state geologist. But to supplement its inadequate yield, I do not understand how the 1931 legislature could give the geologist's office the entire yield of the sand and gravel tax when Act 118 of 1923, severance

tax when act 118 of 1923, severance tax law, lists these two products specifically with others on which two-thirds of the proceeds are to go to the state common school fund and one-third to the counties of origin which are to divide it equally between their school and road funds. If this tax has been previously going into the general revenue, and not into any educational fund, as per the Gazette editorial, then it seems that in the light of the severence tax law something has been going wrong ever since the law went into effect in 1923.

To the Editor of the Gazette:

Permit me to thank you for your editorial in which you make it clear that the funds used for the support of the state Geological Survey have not been diverted from school funds.

It is correct that the appropriation for the support of the Geological Survey have not ever, does not mean that this amount actually will be received. Taxes received from all sources for the support of the Geological Survey for the first six months of the biennium 1931-1933, according to the records of the state treasurer, are as follows:

Sand and Severance Gravel Sale of Tax Tax Tax Dublications.

July 3418.23 \$994.44 \$58.65
August 287.34 1,491.50 79.15
September 501.75 279.34 45.52
October 554.20 1,544.96 193.74
November 333.33 315.72 552.8
December 982.70 822.30 13.40

The aggregate of the three totals is \$9,026.55. If we estimate the receipts during the remainder of the biennium on the basis of the above six month period, the total will be \$36,106.20, or \$18,053.10 for each fiscal year, which is about 51 per cent of the appropria.

about 51 per cent of the appropriation. It is apparent, that the one-tenth of one per cent on minerals taxed on an ad valorem basis and the one-tenth of one cent per ton on man-presented it recently at a meeting in Wightia Kan ganese, which was added to the sever-ance tax in 1927 for the support of the Geological Survey, is not producing a revenue of anything like \$35,000 per

The severance tax authorized under Act 118 of 1923, and as subsequently amended, and the so-called sand and gravel tax authorized under Act 138 1915, and as subsequently amended are entirely different taxes. The severance From 1923 to 1927 two-thirds of the severance tax was distributed to the common school fund and one-third to the county in which the mineral was severed. In 1927 the addition referred to in the third paragraph above was authorized and this supported the state Geological Survey from 1927 to 1931.

From 1915 to 1931 the sand and gravel tax was allocated to the general revenue fund but, on account of the fact that the severance tax support of the Geological Survey had dropped from \$32,829,15 in 1927-28 to an estimated \$15,608.00 in 1930-31, the 1931 legislature saw fit to allocate the sand and gravel tax as an additional support to that survey. to that survey.

It will be seen that none of

funds which have been made available for the support of the Geological Survey have in any sense been diverted from funds set aside for the support of the schools.

George C. Branner, State Geologist. Little Rock, Ark.

Geologist Is Speaker At Luncheon of Co-Ops

The geological formations and mineral deposits of Arkansas were described to members of the Co-Operative Club by Dr. George C. Branner, state geologist, at the club's weekly

state geologist, at the club's weekly luncheon meeting at the Albert Pike hotel Friday.

"The common statement that Arkansas is the richest state in mineral resources has no meaning," said Dr. Branner. "Arkansas ranks 17th or 18th in value of mineral production."

He said that he had considerable hopes for the commercial value of barite deposits at Magnet Cove. The deposit there is unique in the United States, he asserted.

He said that the recently opened cinnabar deposits in southwest Arkansas looked promising but that their commercial possibilities were still doubtful. Commercial diamond production in Arkansas stopped October duction in Arkansas stopped October

C. Branner Again Secretary Of American State Geologists.

George C. Branner, state geologist, has returned from Washington, D. C., where, for the third consecutive year,

he was elected secretary of the Association of American State Geologists.

Mr. Branner also attended a conference with the director of the United States Geological Survey regarding work which the federal body plans in o-operation with the state geological

co-operation with the state geological surveys.

To the Editor of the Gazette:

Permit me to thank you for your

co-operation with the state geological surveys.

Co-operation with the state geological surveys.

Previously, Mr. Branner attended a meeting of the American Institute of Mining and Metallurgical Engineers. He read a paper on "Cinnabar Deposits in Southwest Arkansas," discussing the geology of the territory, the development and recovery of the deposits.

The paper was illustrated with lantern slides and aroused considerable interest among the engineers from all over the United States. Several sought him out after the meeting and requested further details.

presented it recently at a meeting in Wichita, Kan.

Would Make State Geological Survey the 'Sales Department.'

To the Editor of the Gazette

If the present sources of revenue of the state are insufficient to meet the lowest possible cost of government would it not be good business to make a strenuous effort to develop new sour-ces rather than hope to meet the obli-gations by additional taxation?

Arkansas has inexhaustible deposits

of valuable clays, marbles, sands, manganese, zinc, etc., natural gas, electricity and coal, that should, from its geo-graphical position, supply much of the country with articles made within its

The present depression has caused a relaxation in every industry. To get into production every manufacturer is lookproduction every manufacturer is looking for an advantage over the past method and it is my thought that by getting in behind our state Geological Survey, considering "the sales department" for the natural resources of the state, furnishing them with funds, at the expense of other state departments, sufficient to enable them to properly survey and in detail report on the very survey and in detail, report on the various minerals we have, many large and varied industries could be induced to move to Arkansas.

To interest a manufacturer, concrete, scientific information is essential and if our Geological Survey is put in a position where it can obtain such in-formation, development will follow. William G. Rhinehart.

Batesville, Ark.

THE STATE GEOLOGIST AS AR-KANSAS'S "SALESMAN."

It is the suggestion of William G. Rhinehart of Batesville that the state Geological Survey should be made a "sales department" for the development of new lines of business and new sources of public revenue. He points out that Arkansas has not only inexhaustible deposits of valuable clays, marbles, sands, manganese, zinc, and other minerals and metals, but also the natural gas, coal and electric power needed for their treatment and fabrication, and a geographical position favorable to wide shipment and marketing.

With more adequate financial support, the state geologist's office could serve Arkansas far more effectively as a "sales department." On its mailing list are libraries and technical schools all over the world. Notices of its reports on specific subjects are sent to all engineers and manufacturing concerns that might be interested. Last year, for example, a mimeographed report on the barite deposits in Hot Spring county was so distributed. A report on the cinnabar discovery in southwest Arkansas will be sent out soon in as extensive form as funds permit. As for the clays of which Mr. Rhinehart speaks, the only existing report is a government one printed many years ago, but the state geologist is endeavoring to get the industrial departments of the railroads serving Arkansas to co-operate with his office in an exhaustive field survey and report that will make known the nature, location and extent of all

valuable clay deposits. Another project which is marking time for lack of funds is the practically complete report on an oil and gas survey of the Arkansas gulf coastal plain, containing 60 maps and graphs, and dealing with the geological structure county by county. A report on the black marbles of north Arkansas is also practically ready for publica-

How effectively the state Geological Survey shall function as a "sales department" for Arkansas seems to depend primarily on how adequately the state is prepared to finance its invaluable work.

GEOLOGICAL SURVEY IN SERIOUS PLIGHT

Forced to Stop Important Work Because of Lack of Funds.

By DUDLEY V. HADDOCK.
(Secretary, Arkansas Industries Association,

The Arkansas Geological Survey didn't have to assure Governor Par-nell that it would comply with his re-quest to save 20 per cent of its appro-priation during the remainder of 1932 lack of revenue has trimmed it nearly 50 per cent during the fiscal year ending June 30 and there are ample indications that this will continue through December 31.

except coal and manganese, one-tenth tions entirely, of a cent per ton on manganese—which A technical entirely from minerals.

does not benefit from the severance tax on lumber, but receives its revenue entirely from minerals.

With authority to spend \$35,000 during the fiscal year, its receipts the first 10 months aggregated only \$15,083 and if the revenue during May and June its in the same proportion it will end the year with an income of only \$18,099, or 48.3 per cent of its appropriation.

In the face of this, the salary list has been reduced in order that it might continue its activities after a fashion. The February pay roll aggregated \$932,50 while that for April was only \$778.22. This saving has been effected by dispensing with a part-time field man, putting the draftsman and librarian on part time and trimming salaries five per cent.

In Deplorable Plight.

This most important department of the state—for a large part of Arkansas' wealth lies in its vast store of undeveloped minerals and it must be determined definitely what they are, and their extent, before their exploitation can be expected—is in a deplorable condition because of lack of funds. Field activities have been sharply curtailed and co-operation with the United States Geological Survey in geological topographic and stream gauging work—the latter has to do with ascertaining the water power potentialities of the state—has been discontinued.

Several major reperts on resources compiled after painstaking research and work in the field, are unpublished although their distribution undoubtedly course of preparation for about two would interest new capital in the state trans to department of the geological reports which had been in the transport of the income was adequate to meet the printing of four work in the field, are unpublished although their distribution undoubtedly course of preparation of these reports had the matter in the state printing of four work in the field, are unpublished although their distribution undoubtedly course of preparation for about two would interest new capital in the state part of the state part of the state part of the state part of the st

ing warrants had been paid.
"The clause referred to is an unusual one, being found in only one other state appropriation act, so far as I know The attorney general, auditor and comptroller are attempting to work out some way whereby the Geological Survey may pay operating expenses until the legislature meets, when funds will be released by that body.

"If the present situation, to which all oncerned are innocent parties, cannot be adjusted the department will be without funds to operate until released by the legislature. There is adequate cash now in the fund to permit the department to operate. I very much hope like the department are he kept intest. hat the department can be kept intact ernor McRae in 1923.

nt and potential."

SUBMITS REPORT

Includes Recommendations for Legislative Action to Assist in Work.

Activities of the state Geological Survey during the past year and an outline of work proposed for the next biennium are contained in the annual report of the department, filed with Governor Parnell yesterday by George C. Branner, state geologist. The administrative report covered the period from December 1, 1931, to November 30, 1932.

Although the 1931 General Assembly appropriated \$35,000 for the department, the tax accruing to the geological fund from the designated sources totaled only \$17,699.22 for the fiscal year 1931-32. This money was derived from the following sources: One-tenth of one per cent of the severance tax on certain minerals, \$6,901.52; from sand and gravel tax, \$9,762.71; sale of publications and miscellaneous sources, \$1,035.22.

The amount available for operation of the apartment was 17.9 per cent less than for the preceding fiscal year and was only 50.5 per cent of the amount appropriated. The decrease in receipts was attributed mainly to the decrease in petroleum, the principal revenue-yielding product under the severance

The department has co-operated with the federal government and private agencies in geologic, topographic and stream gaging work. Funds received from such co-operating agencies during the fiscal year ended last June 30, totaled \$1,700, and it was estimated that receipts from these sources for the fiscal year ending part June 30, will total cal year ending next June 30, will total

A summary of the status of mineral operations in Arkansas, the activities of the Geological Survey, and recom-mendations for increasing the usefulness of the department, as given in the report, follows in part:

Status of Operations Given. In 1929, the last year for which complete figures are available, the mineral industries of Arkansas yielded mineral products valued at \$41,324,576. This amount was eight per cent of the total value of agricultural, mineral, timber and manufactured products for the and manufactured products for that year (\$515,231,800). Approximately 33,-000 persons in the state were depend-ent on the mineral industries for support in that year. In 1929 these industries expended in the state at least 75 per cent of the values produced, or \$30,993,432. Of this amount, at least \$2,153,571 were paid into the state, city

and county treasuries as taxes.

During the fiscal year 1931-32, 39 geological surveys were operating in the United States, with available funds aggregating \$1,381,357. This is an average of \$35,419 per state. The amount available for the Arkansas Geological Survey for the fiscal year 1931-1932 was \$17,698, or approximately 50 per cent of the above average.

It has been estimated that for every dollar of value of minerals produced in this state during the calendar year and county treasuries as taxes.

this state during the calendar year 1929, 0.93 mills were made available by the legislature for the support, during the fiscal year 1929-1930, of state agencies which contributed to the development of the mineral industries. Howing to the development of the agricul tural industries, 1.56 mills per dollar of agricultural value were made available

In connection with stream gaging, the estimated potential economic water power available in Arkansas is about 525,000 horsepower. At the present time approximately 11 per cent of this has been developed. It is therefore important that stream-flow measurements for an unbroken long-term period be available to power companies when any hydro-electric development is contemplat-The total allotments by 36 states for stream gaging during the fiscal year

ending June 30, 1933, was \$456,891, an average allotment per state of \$12,-691. The Arkansas allotment during that period was \$800, or 6.3 per cent of the average.

Recommendations Offered.

With the above facts in mind, it is recommended that:

until the legislature meets as the survey has accumulated a vast amount of data and has built itself up to a relatively strong constructive force within the the state since its creation under Gov- function for the remainder of the fiscal nor McRae in 1923.

"Disintegration of the department the severance tax, sand and gravel tax, would mean, I believe, a very great loss and sale of publications and miscellaneous sources is sufficient to permit

laneous sources is sufficient to permit this office to operate until July 1, 1933.

2. So far as possible, increased funds be made available by the legislature to this office, during the biennium 1933-1935 for both geological and stream gaging work, and especially for the publication of six reports, aggregating 1,043 pages of text. No request for funds for topographic mapping is being made at this time. Co-operative federal funds are available for some types of geologic work and are available on a state-fedwork and are available on a state-fed-eral 50-50 basis for stream gaging. Unless sufficient funds are provided for stream gaging, the state-federal stream gaging program in Arkansas will, of necessity, be discontinued on July 1,

Measures which provide for an increase in the state geologist fund have been prepared for submission to the legislature. These provide for (1) a slight increase in the present severance tax percentage allocated to the state geologist fund, (2) an equitable increase in certain items affected by the sand and gravel tax, and (3) the reservation of a fraction of the mineral rights in state lands to the state for the benefit of the state geologist fund and the permanent school fund. These measures affect a relatively small group of industries only, and the estimated income which will be provided, as set forth below, will be used for the purpose of indirectly creating new tax revenues.

It is estimated that the total income resulting from the passage of the above measures, if they are enacted, together with that derived from the present sources of income, will be as follows:

Fiscal year Fiscal year 1933-1934 1934-1935.

Estimated amounts
from present sources
of income\$12,614,52 \$ 8,583.59
Estimated amounts
from passage of
proposed bills 15,629.00 11,204.00

3. Provisions be made to enable this office to co-operate with county assessors for the purpose of equalizing assessments on mineral properties. Instances have been brought to our attention which lead us to believe that a considerable increase in the general property

tax revenue of the state can result from such co-operation. 4. Sufficient funds be provided the state mine inspector so that he can properly collect and check mineral pro-

Release of Geological Funds Sought

Branner Makes Recommendations for Operation of Department.

Recommendations that funds accrued to the state geologist fund during the present fiscal year be released by the 1933 legislature to insure functioning of the department during the remainder of the fiscal year, that a slight increase in the present severance tax percentage to the geologist fund be made and reservation of a fraction of mineral rights in state lands be credited to the fund are contained in the annual administrative report of the Arkansas Geological Survey submitted yesterday by George C. Branner, state geologist, to Governor Parnell.

The funds recommended to be remainder of this fiscal year are derived from the severance tax, sand and gravel tax ad the sale of publications and miscellaneous sources.

Mr. Branner recommended that so far as possible increased funds be made available to the department during the 1933-35 biennium for both geological and steam-gaging work, and for the publication of six reports. No for the publication of six reports. No request is made for funds for topographic mapping. Unless sufficient funds are available for steam-gaging, he said, the state-federal steam gaging program in Arkansas will be discontinued on July 1, 1933, the end of the present biennium.

Branner said, for an increase in the geological fund. These include a slight increase in the severance tax percentage allocated the severance fund, an increase in certain items at forced by the sand and gravel tax, and increase in certain items at forced by the sand and gravel tax, and increase in certain items at forced by the sand and gravel tax, and increase in certain items at forced by the sand and gravel tax, and increase in certain items at forced by the sand and gravel tax, and increase in certain items at forced by the sand and gravel tax, and increase in certain items at forced by the sand and gravel tax, and increase in certain items at forced by the sand and gravel tax, and increase in the severance state of the state geological state

It is asked by the geologist that sufficient funds be provided the state mine inspector so that he can properly collect and check mineral production statistics in connection with his present duties.

present duties.

During the fiscal year of 1931-32, the state geological department had available for its operations \$17,699.45, or 17.9 per cent less than during the preceding fiscal year when \$21,577.39 was available, and 50.5 per cent of the amount appropriated by the legislature for the fiscal year, a total of \$35,000.

"The decreese in residue of 1931-32, the state o

\$35,000.

"The decrease in receipts has been due primarily to the decreased production of petroleum, which has not been offset by the income from the sand and gravel tax. It is estimated that the income from all sources for the fiscal year 1932-33 will be approximately \$13,900," the report to the governor said.

PUBLIC PROFIT FROM THE GEO-

The state geologist's office has done the field work and prepared an exhaustive report on oil and gas formations in the coastal plain section of the state, but lack of funds has held up its publication. Reports on other mineral deposits are ready or nearly ready to be published. Other field surveys are under way or projected.

Teceived the bills will be introduced in the legislature, Mr. Bair said.

Committees for the eighth annual meeting of the Arkansas Engineers Club, which will be held in Little Rock February 24 and 25, were announced by W. W. Zass, president of the state club. They are: Stunts and entertainment, R. A. Kern, chairman; Sam Brady and Fred Hargett; registration and arrangements, R. C. Gibson, chairman; D. H. Daugherty and M. E. Bordwell; finance, A. C. Galt, chairman; J. H. Crossman Stream gauging, which lays the ground A. C. Galt, chairman; J. H. Crossman and Henry Grauptner. work for water power development, is being carried on, while in conjunction with the United States Geological George Lescher was introduced as a new survey the state geologist is making member of the club. topographical maps.

The Little Rock Engineers Club has adopted a resolution urging the legislature to make an appropriation to has sent an article on "State Geological Surveys" for publication in the American the mining industry of the country, time geologists and 255 part-time geologists and 255 part-time geologists we have maintained the state Geo-ogists and other technically trained we have maintained the state Geo-ogists and other technically trained logical Survey. Though most of its men were engaged in carrying on 409 work may not seem to touch the av-logic, topographic and soil surveys, crage person directly, its results are stream gauging and miscellaneous proj-

been offered space in the International sociation is composed of the geologists Exposition in Chicago and the director of the Geology Section has requested that exhibits be prepared showing the geological, topographical and relief maps of the state which have been maps of the state which have been prepared by the state survey and also has asked for exhibits of cinnabar, black marble and bauxite, George C. Branner, director of the state Geological Survey and vectorder ical Survey, said yesterday.

Federal aid will be withdrawn from the state for this work unless at least \$3,000 is appropriated, George C. Branner, state geologist, said. Another resolution was adopted asking the survey and the state Highway Commission to set aside funds for carrying on the work of making topographical maps. The resolutions were introduced by W. Terry Feild and were given to Mr. Branner and M. Z. Bair, engineer of the state Health Department, who will confer with the Legislative Committee of the club. Arrangements will be made for funds to have its report. for funds to have six reports of the survey, which have been completed, published.

Don A. MacCrea, who recently received information from the American Engineering Council on advance planning of public works by state and local government as an aid in the stabilization of employment and industry, sub-mitted the inquiry as to whether the

mitted the inquiry as to whether the club would sponsor legislation along this line, but no action was taken. Bills to permit municipalities in the state has received literally millions of dollars. From the viewpoint of revenue alone, Arkansas has a tremendous interest in the opening of new oil and gas fields. We would profit in the same way from the development of other mineral resources subject to the severance tax.

The state geologist's office has done the field work and mutatry, submitted the inquiry as to whether the club would sponsor legislation along this line, but no action was taken.

Bills to permit municipalities in the state to borrow money from the Reconstruction Finance Corporation to build waterworks and sewage systems on a self-liquidating basis have been sent to T. J. Gaughan, legal representative for the R. F. C., in Washington, for his approval, Mr. Bair, a member of the subcommittee of the Arkansas Division of the National Committee for Trade Recovery, which prepared the bills, said. As soon as Mr. Gaughan's approval is received the bills will be introduced in the legislature, Mr. Bair said.

George Suter, president, read the resolution on technocracy recently adopted by the American Engineering Council.

State Geologist's Article Will Be 1-7-3 Published.

understood that Arkansas has a richer can Yearbook for 1932 at the request variety of mineral resources than most of the American Yearbook Corporation variety of mineral resources than most states. But they do us no good, either as economic assets or sources of public revenue, so long as they are unceveloped. To assist in their development by locating and mapping them and laying authoritative facts before trol of the state. Approximately 95 full-transfer and 255 part-time geologists and 255 part-time geologists.

Space in Chicago Exposition

Bulletin on Rock Salt Discovery In Union County Out Soon.

A bulletin on the discovery of rock salt in a deep well test in Union county will be published soon by the state Geological Survey, it was announced yesterday by George C. Branner, state geologist. The bulletin was written by H. W. Bell, vice president of the Lion Oil Refining Company, which drilled a well 7.255 feet deep in the East Smackover field to determine what geological structures exist at that depth. This is the deepest well ever drilled in the Gulf Coastal section, Mr. Branner said. Salt rock was encountered at 5,950 feet and the drilling continued through the same structure 1,295 feet. The 35-page litho-printed bulletin will discuss the geological possibilities of the origin of a salt deposit of that thickness at such a great depth. A bulletin on the discovery of rock

RELIEF MAPS OF STATE AVAILABLE

Plaster Models Similar to That Displayed at World's Fair in

Played at World's Fair in

Chicago.

Plaster models of a relief map of Arkansas, similar to one placed on exhibition in the Geology Division of the Hall of Science at the Century of Progress Exposition in Chicago recently, are ready for distribution by the Arkansas Geological Survey, it was announced yesterday by G. C. Branner, state geologist.

The map is about 36 by 33 inches and is suitable for framing under glass for use in schoolrooms, offices, etc. The horizontal scale is about eight miles to the inch and the vertical scale is 3,750 feet to the inch. Differences in elevation over the state thus are brought out by evaggerating the vertical scale approximately 10 times that of the horizontal, Mr. Branner said.

Mrs. D. C. Sawyer was employed by

proximately 10 times that of the horizontal, Mr. Branner said.

Mrs. D. C. Sawyer was employed by the Geological Survey to construct the original model, which was based on the topography of the state as shown by a larger topographic map published by the Geological Survey in 1930. Several months were required to construct the original model, which was made of cardoriginal model, which was made of card-board cut by hand and pasted on in ridges and mountains. The rough map thus constructed was given a wax treatment and a negative was cast in plas-ter of Paris. Any number of positive copies now may be cast from the nega-

GEORGE C. BRANNER HEADS GEOLOGISTS

Elected President of Association at Annual Meeting, Held in Washington.

George C. Branner, state geologist, was elected president of the Association of American State Geologists at the annual meeting February 23-25 at Washington, D. C., it was announced yesterday upon his return to Little Rock. Mr. Branner had served as sections of the acceptance of the acc retary of the association for the past four years.

The principal part of the session was taken up with conferences with the director of the United States Geological Survey and representatives of other federal bureaus on various federal-state co-operative projects, Mr. Branner

Charles W. Eliot, executive officer of the National Planning Board, ad-

dressed the conference.

Other officers elected were Arthur
Bevan of Virginia, secretary, and Raymond C. Moore of Kansas, third member of the Executive Committee. The association is made up of state geologists of 39 state surveys, the aggregate appropriations for which are about \$700,000 for the present fiscal year. Mr. Branner said.

Dr. Branner Is Honored By National Association

Dr. George C. Branner, Arkansas state geologist, last week was elected president of the Association of Ameri-

can State Geologists at the association's annual meeting at Washington, D. C.

He served as secretary of the association for the past four years. He has been state geologist of Arkansas for six years.

The association is composed of state

The association is composed of state geologists of 39 state surveys, the aggregate appropriations of which amount to about \$700,000 for the present fiscal year.

Dr. Branner said that the principal part of the abnual meeting was taken up by conferences with the director of the U. S. Geological Survey and representatives of other federal bureaus on various federal-state of the assistant secretary of war.

IN CHICAGO DESIRED

Movement Begun by Mrs. W.

A movement to establish a suitable Arkansas exhibit at the Century of Progress Exposition in Chicago next summer has been launched by Mrs. W. C. Mortimer, 4819 Lee avenue, with the endorsement of Governor Futrell, Mrs.

Governor Futrell will handle the of-ficial correspondence, Mrs. Mortimer said, and she began the movement to obtain an exhibit because of the display which gained the state considerable criticism last year.

Mrs. Mortimer said she is requesting each chamber of commerce in the state to obtain \$1 from each member for the exhibit, and she is asking the lumber companies to construct a house for the exhibit. The utility companies will be

asked for contributions.

Checks for contributions should be sent to Governor Futrell, Mrs. Mortimer

Group to Foster Arkansas Exhibit

An executive committee composed of L. J. Arnold of Crossett, L. J. Longino of Pine Bluff, E. L. Howlett of Hot Springs, Harley C. Stump of Stuttgart, and James A. Ward, representing various business organizations and industries, was apopinted Monday afternoon by Governor Futrell to proceed with plans for financing an Arkansas exhibit at the Century of Progress Exposition, which opens May 26 in Chicago.

The committee will meet at the capitol next Monday to consider further plans in connection with the proposed exhibit, which sponsors have estimated will entail an expense of about \$25,000.

will entail an expense of about \$25,-000. Various industries will be asked to provide suitable exhibits and to make contributions to the general overhead expense of maintaining the display.

Monday's conference was held at

head expense of maintaining the display.

Monday's conference was held at the governor's reception room in the state capitol. Besides the governor and members of the new executive committee the following attended:

George C. Merkle, manager of the Pine Bluff Chamber of Commerce; Jack Porter, Forrest City; Dudley V. Haddock, secretary of the state chamber of commerce; Seott D. Hamilton, manager of the Hot Springs Chamber of Commerce; J. K. Mahoney, El Donado; James Lucas, Morrilton; Guy Amsler, secretary of the Arkansas, Game and Fish Commission; F. W. Scott, Huttig, president of the state chamber of commerce; Robert H. Brooks, Little Rock, representing the pine lumber industry; W. E. Phipps, state commissioner of education; W. W. Shaver, Wynne; Mrs. Frank H. Dodge, Little Rock; D. A. Matthews, farm representative of the General American Insurance Company; Mrs. W. C. Mortimer, Warren; E. C. Hornor, Helena; T. Roy Reid, assistant director in charge of agricultural extension service; George C. Branner, state geologist; Roy W. Spence, secretary of the state highway commission; L. Branting. Bauxie; C. D. Hyten, Benton; E. R. Lynn, Memphis, representing Hardwood Manufacturing Institute; W. A. Wall, Little Rock, representing natural gas interests, and A. W. Parke, secretary of the Arkansas Centennial Association.

Responsibility Put Up To State Geologist 193

In another epinion, Mr. Smith advised George C. Branner, state geologist, that he had no authority to purvey and representatives of other fed-eral bureaus on various federal-state vately printed, unless the geologist beco-operative projects. Among the speakers were Charles W. Elliot, executive officer of the National Planning Board, and Lieut. Col. Harris of the Commodities Division of the office partment's appropriation for printing.
Mr. Smith said.

It was reported that arrangements had been made for a Little Rock printing company to print the reports. The department would buy the reports and sell them to those interested, it was 332

Collections of 30 specimens of metallic. non-metallic and fuel minerals of Arkansas have been completed by George C. Branner, state geologist, and are now on sale at his office. The collections have been arranged in a heavy cloth-covered cardboard case, 11 by 16 inches, and are numbered. Numbers on the specimens correspond to numbers of descriptions on a printed list on the inside lid of the case. The descriptions include the names of the specimens, chemical formula, use, county where obtained and general location.

Branner Assembles Collections

of State Minerals.

The collections were designed principally for school use. The metallic minerals are represented by the ores of aluminum, mercury, lead, iron, man-

ganese, zinc and antimony; the nonmetallic minerals are represented by asphaltic sand, barite, bentonite, calcite, chalk, clay, limestone, marble, syenite or "granite," novaculite, peridotite, phosphate rock, pyrite, rutile, silica sand, slate, and tripoli; and the and lignite.

For National Resources Board.

Dr. George C. Branner, state geologist, announced yesterday that he had accepted an appointment as regional water consultant for the National Resources Board. During the next two weeks he will prepare a report on ground water resources of the lower

The availability of water in various localities will be a factor in the program being drafted by the national board in an effort to obtain maximum benefits of natural resources through long time planning. A land use survey for Arkansas, which is expected to be the basis for the planning program in the state, has been sent to the national

Mississippi basin.

Club Hears Geologist. - George C.

Branner, state geologist, discussed sources from which a water supply for Little Rock might be obtained at the meeting of the Kiwanis Club at the Peacock yesterday. Officers and directors of the club will be elected at the meeting next Tuesday.

TO PUBLISH REPORT.

Plans have been completed for publication of a report on the oil and gas geology of the costal plain of Arkan-sas, Dr. George C. Branner, state geologist, said yesterday. Because no state funds are vailable for the publication,

the work will be published privately Dr. Branner said he hopes to release soon a mining directory and a statistical review of mineral production in Arkansas since 1840.

The Increased Demand for Workers Trained in Public Service

(This is the sixth of a series of articles prepared for publication in connection with the observance of American Education Week.)

By GEORGE C. BRANNER.

State Geologist and Member State Planning Board

The New Deal has created a multitude of opportunities for people to demonstrate their qualifications for various types of work which they perhaps never before contemplated undertaking. This change in the vocations of a considerable number of people throws a new

in the vocations of a considerable number of people throws a new burden on those responsible for education.

Representative of these types of employment in Arkansas are certain new developments in the cultivation and care of timber lands, the creation of parks and recreational areas, public health work, land classification, and various statistical projects.

Reforestation is a matter of basic importance to the people of Arkansas at the present time. In Arkansas the peak of the timber business was in 1907 and production has since declined. According to the state Forestry Department, approximately 1,500 men could be employed eight, months a year in fire protection, planting, and patrolemployed eight months a year in fire protection, planting, and patrolling work, and about 11,500,000 acres can be maintained by this force. The work can well be of a continuing nature.

The creation of parks and recreational areas is an outdoor service

of much importance and is another way in which many persons can be engaged. There are five state parks at present and the system is subject to considerable expansion. The development of parks adjacent to highways presents an excellent opportunity for attracting tourists to the state. Also, it is estimated that there are 1,704 communities in the state now in need of parks. Last winter 65 recreational and beautification projects were undertaken by the CWA. These included 13 athletic fields, seven beautification projects, one lake, 10

landscaping projects, 13 city parks, one national park, 13 playgrounds,

five recreational centers, and two swimming pools.

In public health work, three outstanding needs listed by the state Board of Health are the further development of water supply, sewage disposal, and malaria control. Last winter, during CWA activities, 16 projects for the construction of water supply and sewer systems were approved in Arkansas. These represented 56 per cent of all projects approved and many engineers trained in this work will be provided with employment. The many miles of artificial drainage ditches which have been dug in the low-lying delta land along the Mississippi river, constitute active breeding grounds for mosquitoes. It is estimated by the state Board of Health that the work of 1,000 men for a period of 122 days would be required to keep 800 miles of drainage ditches clear of vegetation and debris in Mississippi

The classification of lands for agricultural, timber, and recreational uses is essential to the carrying out of any broad plan for state economic and social improvement. Such work is for trained personnel

and will require many men.

The compilation of various types of statistics bearing on the social and economic life of the city, county, and state are needed, and will doubtless be gathered during the next few years and trained workers will be needed to direct and carry out these various projects.

RECORDS BURNED IN BLAZE AT CAPITOL

Origin of Fire in Storeroom on Fourth Floor Undetermined.

10.13.1934 Fire discovered in a storeroom on the fourth floor of the state capitol shortly before noon yesterday destroyed and damaged records of several state departments. Origin of the blaze was not determined.

The records, most of them duplicates of permanent records kept elsewhere, were stored in the small room, which is directly over the main entrance. A cloud of smoke issued from several round windows of the room and soon attract-

ed a crowd. Volunteers held the blaze in check until the firemen arrived.

State Geologist George C. Branner, whose offices are on the fourth floor, said that when some one called his attention to the smoke he hurried into the corridor but could not determine the source of the smoke. Returning through his office, he walked out on the roof and located the blaze. With Grady McCall, secretary to Governor Futrell, and several others he took a wall hose to the storeroom and held the

Records of Three Departments. Some of the state Planning Board, evenue Department and Geology Department records were burned. state Planning Board and Geology Department records were in the north end of the storeroom, while those of the Revenue Department were on the south side of a beaver board partition.

side of a beaver board partition.

Firemen of Companies Nos. 7 and 8 and trucks Nos. 1 and 2 erected a 50-foot ladder from the main steps to the fourth floor. A line of hose was carried to a ledge on the fourth floor and a stream of water soon was pouring through the small windows into the room. Chief Charles A. Burns and Assistant Chiefs Joe Carmichael and B. S. sistant Chiefs Joe Carmichael and B. S. Harmon directed the work.

As most offices were closed for the Armistice Day observance, the building was practically deserted. There are no electrical wires in the room.

The interior of the room, built of brick and cement, was not damaged. Six minor blazes, including one trash fire and four grass fires were extin-guished yesterday by members of the

The Servants of the People

BY THE GAZETTE STAFF.

Smoke Has Cleared Away; Some Other Things Haven't.

When the smoke from the fire in a storage room on the fourth floor of the capitol cleared away on Armistice Day, it left in its wake a controversy as hot as a "depot stove" as to who discovered the fire, who turned in the alarm and who put out the fire.

Always anxious to keep the people informed concerning the extra-curricular activities of their servants, your correspondent turned Dick Tracy and tried to ferret out the mystery of how come the fire, who discovered it and who put

No tangible evidence was found as to its origin, but here is a good place to correct some erroneous statement to the effect that there was no electric wiring in the storage room. There is a drop light, but there was nothing to indicate that the fire started from a short circuit. The most commonly accepted the-ory is that someone inadvertantly drop-ped a match or cigarette butt in the room several hours, or perhaps the day,

before the fire caused sufficient smoke in the statehouse. to be noticeable.

More Than One Discoverer.

Our investigation revealed that the fire must have been discovered almost simultaneous by two or more persons.

Witness Branner (G. C. Branner, state geologist, who used one end of the storage room for supplies and records of his office) "testified" that he was talking on the telephone when a substitute mail carrier (name not learned) stitute mail carrier (name not learned) stuck his head in the geologist's office door and announced that the building appeared to be on fire.

Mr. Branner ended the telephone conversation abruptly, went into the hall, could smell smoke, but did not see any; he then returned to his office, climbed through a window to a bannistered ledge and thence to the roof, from where he could see much smoke emerging from ventilators in the front central part of the building.

Movements Recounted.

He was accompanied by a draftsman in his office, one Ted Maderis. Affiant Branner admitted modestly that he returned hurriedly through the window, having determined that the smoke was coming from his storage room, the other end of which was used by the Revenue Department to store old records; that he grabbed a wall fire hose just outside his office (and was mildly surprised that the hose unraveled without a kink); that he unlocked the door to the north end of the storage room; that he saw dense smoke and considerable blaze; that he pointed the hose at the blaze, and yelled "Let 'er come," meaning that Maderis should turn on the water.

But backing up a moment, while Branner was on the roof he saw Fire Department equipment tearing down
Capitol avenue and wondered how the
department got the news so quickly.

It developed later that Maderis had
difficulty in turning on the water, that

he had to procure a hammer and screw-driver to turn the valve. Finally the water was turned on, with H. Grady Mc-Call, secretary to the governor, as a witness at least (he appears to have been credited in some earlier reports with having assisted in putting out the fire, but modestly disclaimed any right to be named among the heroic volun-

Temporary Fire Chief Branner kept the stream trained on the blaze until it was discouraged. About the time the blaze was brought under control, the firemen, who had been unable to gain access to the building through the main entrance because it was a holiday, put a hose through a small window from the tall extension ladder which had been hoisted from the pavement below

Now what "burned up" Chief Bran-er was that after the fire apparently had been extinguished, some other volunteer firemen (unidentified) throwing water into the room from a hose at the south door to the storage room, and thus added much water damage to the Geological Department rec-

Other Salient Facts.

Your investigator found, after much sleuthing, that an unidentified Negro velled into the window of the postoffice on the ground floor that the building was afire, that the postmaster relayed the news to Christopher Columbus Toomey, Negro janitor, who rushed into the Department of Education on the first floor, one of the few offices open, and requested Mister Hudson Steele, deputy commissioner of education, to "call the emergency fire department quick, the building is burning."

Witness Steele said he called the Fire Department and hurried to the front of the building, that he saw the equipment coming down Capitol avenue and was amazed at the rapidity with which the department got equipment to the scene.

All are agreed that the fire would have burned itself out without serious damage, if it had not been extinguished because it was in a narrow place with concrete floor, walls and ceiling, except

one wall, which was brick.

Several young women working for the Geological Department, the Planning

Board and the Department of Educatien, and a secretary to one of the Su-preme Court justices played conspicuous parts as spectators, but space forbids recording all their names here.

U. S. Geological Survey Data Available to Public.

The first lithographic edition of the Ozone Quadrangle was received at the state geologist's office yesterday from the Topographical Branch of the United

States Geological Survey. George C. Branner, state geologist, said the edition is available for public use. It includes the topographical map of 250 square miles of the Ozark National Forest, north of Russellville, Dr. Branner said

Fires a Source of Income For State General Fund,

A complaint by George C. Branner, state geologist, following the recent fire at the capitol, has found fertile ground in the minds of some of the employer at the capitol and if the general revenue funds ever is depleted again, there may be an epidemic of incendiary fires

The fire November 11 in a storeroom on the fourth floor burned records of the Geology Department, the state Planning Board and the Revenue Depart-

The records were insured, and Dr Branner announced that he would file s claim for about \$500 for the Geology Department records which were destroyed. The Planning Board's loss will be about \$35 or \$40, it was said, and the loss of the Revenue Department will be negligible.

Dr. Branner regretted the loss of the records but he was planning various uses to which the insurance money might be put. Then he went to the secretary of state's office and learned that the fire insurance premiums were paid from the general fund and that any collections on a fire insurance policy would go to the general fund.

Dr. Branner considers this a great injustice, but state employes who have heard the complaint and whose salaries are paid from the general fund, have

other ideas on the subject.

G. C. Branner Reappointed A: Little Rock. State Geologist.

George C. Branner was reappointed state geologist yesterday by Governor Futrell. Mr. Brannen has been Futrell. Mr. Brannen has been geologist for many years. His father, Dr. J. C. Branner, was the first state geologist of Arkansas.

George C. Branner, state geologist, returned yesterday from Washington, where he was re-clected president of the Association of American State Geologists. This is his second term. Previously he served four years as national secretary. Arthur C. Bevan, state geologist of Virginia, was elected secretary The association is composed of representatives of 38 state geological surveys with appropriations aggregating nearly \$1,000,000. Discussions at the meeting in Washhington dealt primarily with the co-operation of the states with the Public Works Administration, the National Resources Board, the United States Geological Survey, and the United States Coast and Geodetic Survey. man 8.

MEMBERS OF STATE **BOARDS APPOINTED**

Senate Defers Action Until All Selections Are Submitted for Approval.

max 1,1935

Appointments to 16 boards and commissions were su mitted by Governor Futrell yesterday to the Senate for confirmation, but action was withhele until all appointments necessary to confirmed have been submitted.

The appointments submitted were:

Jonesboro A. & M. College—Morr. Block, Paragould, ar J. F. Lee Wilson, Wilson.

Magnolia A. & M. College—Dr. P. M. Smith and Bonnie Davis, Magnolia; Harry J. Lemley, Hope, and Emmett Gaughan, Camden.

Boys Industrial School—M. J. Anders,

Eudora; E. F. Edwards, Conway, and Charles A. Gordon, Pine Bluff.
Arkansas Construction Commission-

Elbert Godwin, Camden, and Albert G. Simms, Lake Village.
Henderson State Teachers College—

Perry F. Nelson, Gurdon and Fletcher

McElhannon, Arkadelphia,
Arkansas History Commission—Miss
Clara B. Eno, Van Buren.

State Hospital-Wilbur Harkey, Mc-Live Stock Sanitary Board-Dr. Reese

Mitcham, Little Rock, and Morris Smith, Birdeye. A. M. & N. College-Harry I. Holder-

ness, Pine Bluff.
Arkansas State Normal—D. L. Purkins, Little Rock; J. H. Andrews, Wynne, and S. Theodore Smith, Con-

State Board of Nurse Examiners— Miss Eva Atwood, Fort Smith; Sister M. Pio, Jonesboro, and Dr. B. D. Lusk, Pine Bluff.

Arkansas Training School for Girls—Ben Brickhouse, Little Rock; Jeff Bratton, Paragould; Dr. Calvin B. Waller, Little Rock; Mrs. J. D. Hammons, Hot Springs, and Mrs. T. J. Newman, Lit-

Tuberculosis Sanatorium—Dr. Charles S. Holt, Fort Smith.

Red River Levee District No. 1-R. L. Bradshaw and Henry Moore Jr., Texarkana.

Miller Levee District No. 2—Ben F. Smith, C. M. Blocker, and T. J. Hinton, Texarkana.

State geologist—George C. Branner,

GEOLOGIST SEEKS PROJECTS.

Dr. G. C. Branner, state geologist, said yesterday that he will file an applica tion soon for several WPA clerical armineral survey projects to be conducted under supervision of the state Geological Survey. One will call for 23 men for eight months to compile and edit reports on field investigations and surveys. Another would require services of three workers several months to draft a set of county maps and a third would require three persons to make a field survey of commercial clays in the state. Seven other field surveys of miner resources would utilize services of

J. Fred Brown Appointed As Severance Tax Agent.

Dr. George C. Branner, state geologist, announced yesterday the appointment of J. Fred Brown, Little Rock attorney and accountant, as state severance tax agent, an office created by the last legislature.

Mr. Brown will work under the State Dr. Branner Will Attend Mining Geological Survey making monthly reports to establish the values of products that the tax may be properly assessed, Dr. Branner said.

Dr. G. C. Branner, state geologist, will go to Chicago September 23 to at-Geological Formations.

George C. Branner, state geologist, and L. A. Henry, landscape engineer for the state Highway Department, announced plans yesterday for erecting large signs along the state's principal highways illustrating and identifying unusual geological formations.

The preliminary program calls for placing signs at Crowley's Ridge near Forrest City and near Fayetteville, Eureka Springs, Hot Springs, Mt. Nebo. Petit Jean and other points where rock and soil formations are of interest to travelers. The signs will be done in colors to show the name and nature of various formations.

Branner, Dr. George C., state geologist, and J. H. Hand of Yellville, manager of Ozark Mine Owners League, leave tomorrow for Chicago where Arkansas metalic minerals will be displayed at American MinDr. G. C. Branner, state geologist, will go to Chicago September 23 to attend the meeting of the Metal Mining Section of the American Mining Consection of the American Mining Conservation policies. Leith of the Univer ty of Wisconsin on mineral conservation policies. Leith is vice chairman of the Committee on Mineral Policies of the National tee on Mineral Policies of the National tee on Mineral Policies of the National Resources Board. Dr. Branner will coperate with J. H. Hand of Yellville, designated as special agent of the governor at the conference, in displaying arkansas lead, zinc, cinnabar and other minerals.

GEOLOGIST TO WASHINGTON.

Dr. George C. Branner, state geologist, would be employed in this work, Dr. Branner was advised by Paul C. Whitney, acting director of the national survey.

The project will be for compilation of data already secured on triangulation, traverse and level surveys in the state. About 20 workers would be employed in this work, Dr. Branner was advised by Paul C. Whitney, acting director of the national survey.

The new project would be consumed to the national survey.

The new project would be consumed to the national survey.

BRANNER

TO REPRESENT STATE. Dr. George C. Branner, state geologist, has been appointed by Governor Futrell as a delegate to the National Rivers and Harbors Conference in Washington April 27 and 28. Congressman W. J. Driver of Arkansas is chairman of a committee in charge of projects to be considered by the conference

ects to be considered by the conference.

Speaker for May 16,36 Hand Welfare Forum

GEORGE C. BRANNER.

GEORGE C. BRANNER.

George C. Branner will address the Publc Welfare Forum of Little Rock at the May meeting, Monday afternoon at 2 o'clock at the Hotel Marion. Mr. Branner, geologist for Arkansas, is president of the American Association of State Geologists. He was a delegate to the recent Rivers and Harbors Congress in Washington, D. C.

At the Forum he will discuss some of the problems confronting those who seek the future development of Arkansas, with emphasis on findings of Rivers and Harbor Congress, and of those of the Arkansas State Planning Board, of which Mr. Branner is vice chairman.

He will be presented by Mrs.

He will be presented by Mrs. Branner, chairman for the divisional program on Community Service. Any interested persons are cordially invited to hear the address.

Welfare Forum Dinner.

Dr. George C. Branner, vice president of the Arkansas State Planning Board, will address the Public Welfare Forum of Little Rock and their guests, on "Arkansas's Potential Resources," and E. L. McHaney Jr. will speak on "Possibilities for Arkansas's Governmental Development" at the annual dinner at the Hotel Marion Wednesday evening at 6 o'clock. Guests of honor will be, Mrs. J. W. Velvin, Lewisville, president of the Arkansas Federation Women's Clubs, Mrs. S. H. Mann of Forrest City, General Federation director for Arkansas; Mrs. Elwood Baker, Dermott, first vice president, and Mrs. W. H. McCain, Cotton Plant, second vice president, A. F. W. C. A number of invitations for this affair have been issued by Mrs. J. H. Scroggin, president of the Forum, who will preside at the dinner, and Mrs. George C. Branner, chairman on invitations. The speakers will be presented by Mrs. Vaughn W. Root, who arranged the program. Reservations may be made through Mrs. Clio Harper, 4-5357, until noon Wednesday. Board members of the Arkansas Federation Women's Clubs who will be in the city for conferences prior to the opening of the two-day biennial state convention of the Federation Thursday morning, are cordially invited to make reservations for this affair.

Head Reserve Officers 335

DR. GEORGE BRANNER and LT. COL, FRANK E. LOWE.

Dr. George Branner, state geologist, a major in the Organized Reserve of the United States Army, yesterday was elected president of the Arkansas Department of the Reserve Officers' Association of the United States to succeed Maj. A. L. Theiss. He was elected at the annual convention which opened yesterday morning and will continue through this morning.

One of the principal speakers at the meeting was Lt. Col. Frank E. Lowe of Portland, Me., president of Lain.

Hear Col. Lowe National Group Donocraf 5-24-36 D

the National Guard Association of Arkansas.

Other guests attending the convention include: Col. C. H. Muller, St. Louis, chief of staff of 102nd Division; Lieut. John S. Snyder, St. Louis, commanding officer of 381st Field Artillery; Major M. R. Baer, former co-ordinator of reserve affairs for Arkansas; Major Grover C. Graham, district commander of the CCC; Major Benjamin H. Hensley, co-ordinator of reserve affairs; and Capt. Grant Heninger, unit instructor of the 381st Field Artillery.

Reserve Officers Branner Names

Arkansas reserve officers in their annual convention here yesterday of Porland, Me., president of the Reserve Officers Association of the United States, discuss national defense and activities of the association and elected Dr. George C. Branner, state geologists, so the same of the succeed Major A. L. Theiss. Dr. Branner is a major in the Organized Reserve.

The convention opened yesterday morning and will continue through this morning when delegates to the national convention late in June in Springfield, Mass., vill be elected.

In addition to Dr. Branner, other officers elected yesterday are: Major Joe A. Day, Fort Smith, vice president; Capt. J. L. Lay, Little Rock, secretary-treasurer; Capt. Bernard T. Heinze, Little Rock, historian; Capt. Leo Murphy, Junction City, judge advocate, and Lieut. J. A. Kilburn, Arkadelphia, chaplain.

Members of the association attended a dinner and dance last night at which Colonel Lowe was the principal speaker. Major Day was toastmaster and short talks were given by Mayor Overman, who welcomed the visitors; Lieut. Gov. Lee Cazort, representing Governor Futrell and Lieut. Ellis M. Fagan, representing the National Guard Association of Arkansas.

Other guests attending the conventions in their samples of the convention of the Association of Arkansas.

Other guests attending the convention of the Association of the Arkansas.

Dr. Branner Names Group To Seek Mapping Program.

Dr. George C. Branner, state geologist and president of the Association of State Geologists, announced yesterday that he has appointed an advisory committee to work with the American Engineering Council in an effort to obtain legislation to authorize completion of national mapping program. F. Feigker of Washington, eecutive secretary of the Engineering Council, suggested appointment of the committee and asked Dr. Branner to serve as chairman. State geologists named on the committee by Dr. Branner were F. M. Bevan of Virginia, M. M. Leighton of Illinois and George H. Ashley of Arkansas Geologists On Special Committee

Acting at the request of Col. C. T. Harris Jr. of Washington, D. C., director of the planning branch of the office of the assistant secretary of the United States War Department, Dr. George C. Branner, state geologist and president of the Association of American State Geologists, has designated each of the state geologists on a special committee to assemble information on certain strategic mineral resources essential to an adequate national defense.

The information will be assembled

by Dr. Branner and forwarded to war department officials when the state geologists submit their reports to him relative to a list of 17 min-erals about which the planning branch of the War Department is seeking information seeking information.

States' Geologists to Provide Dr. Branner made the trip to Washington in the interest of secur-Data for War Department.

Dr. George C. Branner, state geologist and president of the Association of American State Geologists, announced yesterday that he has appointed a series of committees to assemble information on certain minerals in which the War Department is interested for pos-War Department is interested for possible national defense uses. All the state geologists were named on committees and their reports will be assembled by Dr. Branner, a major in the Reserve Corps, who will forward them to War Department officials.

State Geologist Says

Funds Due Department

Advised by Dr. George C. Branner, state geologist, that a compilation of severance tax figures from 1927 to 1936 has disclosed that \$855.28 apparently is due the geologist's fund from the trunback and common school funds, J. Hugh Wharton, assistant attorney general, today in an opinion held that the money may be transferred from the two funds and credited to the fund for the operation of the state geology department.

for the operation of the state geology department.

Wharton, however, suggested that the amounts due to be refunded should be certified by either the state auditor or the state comptroller to the state treasurer before the treasurer makes the transfer.

Dr. Branner in suggesting the transfer said that he has found errors indicating \$285.06 is due from the turnback fund, and \$750.22 from the common school fund, as moneys due under acts creating the office of a state geologist and providing for the maintenance of the new office.

Geologist Receives Maps.

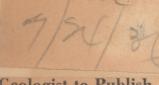

GEOLOGIST RETURNS.

State Geologist George C. Branner returned yesterday from a trip through the marble quarrying regions in north central Arkansas, where he gathered material for an address to be delivered at a national geological meeting in February.

Dr. Branner Completes Study Of Batesville Formations.

Special to the Gazette.

Batesville, Oct. 23.—George Branner, state geologist, completed a study of marble and sandstone formations here yesterday. He will use material gathered

Geologist to Publish Nine-Volume Report

Publication of a mimographed report of 1,290 pages in nine volumes, which will show more than 9,000 elevations in the state, including the elevations of cities and towns, will be started tomorrow, it was announced today by Dr. George C. Branner, state geologist.

The report is based on data as-

The report will be available for general distribution, Dr. Branner said, but a charge will be made to cover the actual cost of publication. Considerable interest in the report has been shown by engineers over the state and also the utilities companies, Dr. Branner stated.

MAPS RECEIVED.

Dr. George C. Branner, state geologist, has received from the United States Geological Survey lithographic copies of a map of the Alexander quadrangle, southwest of Little Rock. This is one of four quadrangles cornering on Little Rock which is being mapped by the Geological Survey. The Sweet Home quadrangle map was issued several

State Geologist Back

From Map Conference Dr. George C. Branner, state geologist, today returned from Washington, D. C., where he conferred with representatives of the National Resources Committee and the American Engineering Council in connection with a federal mapping program to complete adequate maps for Arkansas and other states in the Union at an estimated cost in excess of \$100.000,000 under a 20-year program authorized several years ago.

Twenty-seven per cent of the land in Arkansas never has been mapped, he said, and an additional 39 per cent has never been adequately mapped for general purposes, and the lack of adequate maps is delaying work undertaken by some of the federal agencies in their work relief projects launched for this and other rojects launched for this and other

To Washington Oct. 24.

Dr. George C. Branner, state geologist, and president of the American Association of State Geologists, will go to Washington October 24 for conferences in connection with plans for securing federal funds for a national mapping program, he announced yesterday.

As president of the organization of state geologists he is serving on a committee on surveys and maps and will work with officials in the geological survey, the coast and geodetic survey, and the national resources committee in an effort to have Congress pass an appropriation measure to carry on a mapping program authorized in earlier legislation.

vantage. Dr. Branner also visited the Cushman manganese mine.

Geologists to Map Democrat 10-28-36 Area Near England Gov. Bailey Urges 37 Federal Map Funds Governor Bailey has written to President Roosevelt urging favorable action on a proposed appropria-

A topographical map of a quadrangle of about 250 square miles near England, which has never before been mapped, will be made by the United States Geological Survey, using WPA labor, it was announced today by Dr. George C. Branner, state geologist, following a conference with C. L. Sadler, chief of the Central States Section of the topographical branch of the Federal mapping agency.

Branner, state geologist.

The report is based on data assembled by a WPA project working under the supervision of George Rogers at the state capitol in conjunction with Dr. Branner and members of his staff since the first of the year.

The first of the nine volumes will deal with elevations in the oil fields area of the state and will include data on 11 counties in south and southwest Arkansas. Each of the volumes will contain four maps of the state and separate maps also have been prepared for each county.

Big Gain In October Revenues

11/1/1936

October revenues from 26 special tax sources totaled \$1,666,027.10, compared with \$1,667,399.77 in September, and \$1,377,044.99 in October, 1935, it was shown in the monthly statement of tax collections issued yesterday by state Revenue Commissioner Earl R. Wise-

Gasoline tax collections for October fell about \$10,225 short of the all-time record of \$881,061.08 set in September, but were \$90,000 higher than October collections last year.

Liquor tax revenue jumped from \$68. 445.70 in September to \$131,305.66, a large part of which was said to be due to extra stocks being acquired for fall and Christmas trade.

Sales tax collections increased from \$281,864.65 in September to \$364,625.11. Toll bridge receipts decreased about \$5,300 from September, but were more than \$9,000 higher than in October last

Comparative Table. October receipts from all special sources, compared with revenue for the corresponding period last year, are shown in the following table: Oct. 1936.

points in the state. The information is being compiled from unpublished state and federal surveys made several years

Governor Bailey has written to President Roosevelt urging favorable action on a proposed appropriation of \$5,000,000 annually by congress for 20 years to provide funds for a systematic mapping program to complete topographic maps of the nation. The mapping program has been planned by Secretary Iickes of the department of the interior.

Sixty-five per cent of this state, or an area of about 35,000 square miles is inadequately mapped and the lack of data, which would be available upon completion of such a program, makes it difficult for public agencies to select locations for highways, plan flood protection and soil erosion projects.

The Arkansas legislature was asked to pass a bill providing \$15,000

annually to be used by the state geologist to pay the state's share of a joint mapping program to be financed largely by federal authorities. The measure secured a majority vote in the House and was declared defeated because it failed to secure a three-fourths vote from the House. The bill passed the Senate and Jack Holt, attorney-general, has been asked for an opinion if the three-fourths vote is necessary for passage.

Governor Endorses

Systematic completion of topographic mapping of the United States within 20 years, as proposed by Secretary Ickes, was endorsed by Governor Bailey in a letter to President Roosevelt yes-

Governor Bailey, in urging the acceptance of Mr. Ickes' program, which provides for an annual appropriation of \$5,000,000 for mapping work, called the president's attention to the fact that "at the present time it is estimated that approximately 35,000 square miles, or 65 per cent, of the area of the state of Arkansas is either inadequately mapped or entirely unmapped."

"This lack of accurate and modern maps in Arkansas, in many cases, has made it difficult and often impossible for public agencies to plan public works effectively and has resulted in many delays in planning and constructing The time element involved in the compiling of needed maps often makes their preparation impossible," he said,

Act in Dispute.

Senator Hall of Scotland introduced a bill at the last General Assembly to provide an appropriation of \$15,000 annually, should that sum become available in increased severance tax collections, for use in matching funds of the United States Geological Survey for topographic mapping work in Arkan-

The bill received a majority in both houses, but Speaker of the House John M. Bransford ruled that 75 votes were needed for passage. The attorney general has been asked for an opinion on

In its 1936 progress report, the state Planning Board recommended an annual appropriation of \$15,000 to enable the Arkansas Geological Survey, in co-operation with the United States Geological Survey, to complete mapping of the state within 17 years.

Maps Needed.
The board said that "accurate topographic maps are a basic need for many social and economic uses," among which were listed: Location of roads and highways, estimation of water power, flood control and protection, soil surveys, mineral surveys, forest surveys and fire control health surveys location of airways, location of oil and gas pipelines, location of power lines, parks and ownership maps.

J -25-37 Fifty Years Ago.

(Arkansas Gazette, June 25, 1887.) Hon. John H. Rogers, Member of Congress, is in the city en route home to Fort Smith from Hot Springs, where

Congress, is in the city en route home to Fort Smith from Hot Springs, where he has been spending a few days.

Governor Hughes yesterday ordered a special election in Logan county on July 16 to chose a county treasurer to fill the vacancy caused by the resignation of W. H. Pearson.

All members of the Little Rock Baseball Club are now registered at the Capitol hotel. They returned yesterday from a tour during which they played Pine Bluff and Hot Springs. Their next game will be here with Pine Bluff.

Prof. John C. Branner, newly appointed state geologist, has arrived and is now stopping at the Capitol hotel. He is a graduate of Cornell University of the class of 1874. In the same year he went to Europe and later to Brazil as principal assistant geologist to Charles F. Hartt of Cornell University. He held this position until 1879 when he accepted a similar one, with the duties of interpreter added, with a mining company in the diamond fields of Brazil. In 1880 he returned to the United States and was commissioned by Thomas A. Edison, the electrician, to explore the West Indies and South America. Professor Branner is a widely known authority and author, writing on geological and other scientific subjects. He is a member of the American Association for the Advancement of Science, fic agencies to select locations for highways, plan flood protection and soil erosion projects.

The Arkansas legislature was asked to pass a bill providing \$15,000 annually to be used by the state geologist to pay the state's share of york Academy of Science Institute. York Academy of Science, Institute Archaeologico of Brazil and other domestic and foreign societies.

6-28-37 -Fifty Years Ago. (Arkansas Gazette, June 28, 1887.)

Dr. Thomas B. Comstock yesterday was appointed assistant state geologist by Prof. John C. Branner, and the appointment was approved by Governor Hughes. Dr. Comstock at present is professor of mining engineering at the University of Illinois. He is a native of Ohio. He was graduated at Pennsylvania State College in 1868 and then took a course at Cornell University for the purpose of continuing his studies in geology and chemistry. In 1879 he went to the mineral fields of Colorado and remained there until appointed to his recent position at the University of

Mapping

Fifty Years Ago. (Arkansas Gazette, June 29, 1887.) The Geological Survey has taken ooms in the Odd Fellows building on Markham street. As soon as the book-shelves are put up, all the geological and natural history books in the state library will be made available for the use of the survey. All the rooms in the statehouse were crowded, and hence the survey was forced to secure

rooms outside.
